The New Jim Crow

Mass Incarceration in the Age of Colorblindness

Revised Edition

MICHELLE ALEXANDER
Introduction

Jarvious Cotton cannot vote. Like his father, grandfather, great-grandfather, and great-great-grandfather, he has been denied the right to participate in our electoral democracy. Cotton’s family tree tells the story of several generations of black men who were born in the United States but who were denied the most basic freedom that democracy promises—the freedom to vote for those who will make the rules and laws that govern one’s life. Cotton’s great-great-grandfather could not vote as a slave. His great-grandfather was beaten to death by the Ku Klux Klan for attempting to vote. His grandfather was prevented from voting by Klan intimidation. His father was barred from voting by poll taxes and literacy tests. Today, Jarvious Cotton cannot vote because he, like many black men in the United States, has been labeled a felon and is currently on parole.¹

Cotton’s story illustrates, in many respects, the old adage “The more things change, the more they remain the same.” In each generation, new tactics have been used for achieving the same goals—goals shared by the Founding Fathers. Denying African Americans citizenship was deemed essential to the formation of the original union. Hundreds of years later, America is still not an egalitarian democracy. The arguments and rationalizations that have been trotted out in support of racial exclusion and discrimination in its various forms have changed and evolved, but the outcome has remained largely the same. An extraordinary percentage of black men in the United States are legally barred from voting today, just as they have been throughout most of American history. They are also subject to legalized discrimination in
employment, housing, education, public benefits, and jury service, just as their parents, grandparents, and great-grandparents once were.

What has changed since the collapse of Jim Crow has less to do with the basic structure of our society than with the language we use to justify it. In the era of colorblindness, it is no longer socially permissible to use race, explicitly, as a justification for discrimination, exclusion, and social contempt. So we don't. Rather than rely on race, we use our criminal justice system to label people of color “criminals” and then engage in all the practices we supposedly left behind. Today it is perfectly legal to discriminate against criminals in nearly all the ways that it was once legal to discriminate against African Americans. Once you're labeled a felon, the old forms of discrimination—employment discrimination, housing discrimination, denial of the right to vote, denial of educational opportunity, denial of food stamps and other public benefits, and exclusion from jury service—are suddenly legal. As a criminal, you have scarcely more rights, and arguably less respect, than a black man living in Alabama at the height of Jim Crow. We have not ended racial caste in America; we have merely redesigned it.

I reached the conclusions presented in this book reluctantly. Ten years ago, I would have argued strenuously against the central claim made here—namely, that something akin to a racial caste system currently exists in the United States. Indeed, if Barack Obama had been elected president back then, I would have argued that his election marked the nation’s triumph over racial caste—the final nail in the coffin of Jim Crow. My elation would have been tempered by the distance yet to be traveled to reach the promised land of racial justice in America, but my conviction that nothing remotely similar to Jim Crow exists in this country would have been steadfast.

Today my elation over Obama’s election is tempered by a far more sobering awareness. As an African American woman, with three young children who will never know a world in which a black man could not be president of the United States, I was beyond thrilled on election night. Yet when I walked out of the election night party, full of hope and enthusiasm, I was immediately reminded of the harsh realities of the New Jim Crow. A black man was on his knees in the gutter, hands cuffed behind his back, as several police officers stood around him talking, joking, and ignoring his human existence. People poured out of the building; many stared for a moment at the black
man cowering in the street, and then averted their gaze. What did the election of Barack Obama mean for him?

Like many civil rights lawyers, I was inspired to attend law school by the civil rights victories of the 1950s and 1960s. Even in the face of growing social and political opposition to remedial policies such as affirmative action, I clung to the notion that the evils of Jim Crow are behind us and that, while we have a long way to go to fulfill the dream of an egalitarian, multiracial democracy, we have made real progress and are now struggling to hold on to the gains of the past. I thought my job as a civil rights lawyer was to join with the allies of racial progress to resist attacks on affirmative action and to eliminate the vestiges of Jim Crow segregation, including our still separate and unequal system of education. I understood the problems plaguing poor communities of color, including problems associated with crime and rising incarceration rates, to be a function of poverty and lack of access to quality education—the continuing legacy of slavery and Jim Crow. Never did I seriously consider the possibility that a new racial caste system was operating in this country. The new system had been developed and implemented swiftly, and it was largely invisible, even to people, like me, who spent most of their waking hours fighting for justice.

I first encountered the idea of a new racial caste system more than a decade ago, when a bright orange poster caught my eye. I was rushing to catch the bus, and I noticed a sign stapled to a telephone pole that screamed in large bold print: THE DRUG WAR IS THE NEW JIM CROW. I paused for a moment and skimmed the text of the flyer. Some radical group was holding a community meeting about police brutality, the new three-strikes law in California, and the expansion of America’s prison system. The meeting was being held at a small community church a few blocks away; it had seating capacity for no more than fifty people. I sighed, and muttered to myself something like, “Yeah, the criminal justice system is racist in many ways, but it really doesn’t help to make such an absurd comparison. People will just think you’re crazy.” I then crossed the street and hopped on the bus. I was headed to my new job, director of the Racial Justice Project of the American Civil Liberties Union (ACLU) in Northern California.

When I began my work at the ACLU, I assumed that the criminal justice system had problems of racial bias, much in the same way that all major institutions in our society are plagued with problems associated with conscious
and unconscious bias. As a lawyer who had litigated numerous class-action employment-discrimination cases, I understood well the many ways in which racial stereotyping can permeate subjective decision-making processes at all levels of an organization, with devastating consequences. I was familiar with the challenges associated with reforming institutions in which racial stratification is thought to be normal—the natural consequence of differences in education, culture, motivation, and, some still believe, innate ability. While at the ACLU, I shifted my focus from employment discrimination to criminal justice reform and dedicated myself to the task of working with others to identify and eliminate racial bias whenever and wherever it reared its ugly head.

By the time I left the ACLU, I had come to suspect that I was wrong about the criminal justice system. It was not just another institution infected with racial bias but rather a different beast entirely. The activists who posted the sign on the telephone pole were not crazy; nor were the smattering of lawyers and advocates around the country who were beginning to connect the dots between our current system of mass incarceration and earlier forms of social control. Quite belatedly, I came to see that mass incarceration in the United States had, in fact, emerged as a stunningly comprehensive and well-disguised system of racialized social control that functions in a manner strikingly similar to Jim Crow.

In my experience, people who have been incarcerated rarely have difficulty identifying the parallels between these systems of social control. Once they are released, they are often denied the right to vote, excluded from juries, and relegated to a racially segregated and subordinated existence. Through a web of laws, regulations, and informal rules, all of which are powerfully reinforced by social stigma, they are confined to the margins of mainstream society and denied access to the mainstream economy. They are legally denied the ability to obtain employment, housing, and public benefits—much as African Americans were once forced into a segregated, second-class citizenship in the Jim Crow era.

Those of us who have viewed that world from a comfortable distance—yet sympathize with the plight of the so-called underclass—tend to interpret the experience of those caught up in the criminal justice system primarily through the lens of popularized social science, attributing the staggering increase in incarceration rates in communities of color to the predictable, though unfortunate, consequences of poverty, racial segregation, unequal
INTRODUCTION

educational opportunities, and the presumed realities of the drug market, including the mistaken belief that most drug dealers are black or brown. Occasionally, in the course of my work, someone would make a remark suggesting that perhaps the War on Drugs is a racist conspiracy to put blacks back in their place. This type of remark was invariably accompanied by nervous laughter, intended to convey the impression that although the idea had crossed their minds, it was not an idea a reasonable person would take seriously.

Most people assume the War on Drugs was launched in response to the crisis caused by crack cocaine in inner-city neighborhoods. This view holds that the racial disparities in drug convictions and sentences, as well as the rapid explosion of the prison population, reflect nothing more than the government’s zealous—but benign—efforts to address rampant drug crime in poor, minority neighborhoods. This view, while understandable, given the sensational media coverage of crack in the 1980s and 1990s, is simply wrong.

While it is true that the publicity surrounding crack cocaine led to a dramatic increase in funding for the drug war (as well as to sentencing policies that greatly exacerbated racial disparities in incarceration rates), there is no truth to the notion that the War on Drugs was launched in response to crack cocaine. President Ronald Reagan officially announced the current drug war in 1982, before crack became an issue in the media or a crisis in poor black neighborhoods. A few years after the drug war was declared, crack began to spread rapidly in the poor black neighborhoods of Los Angeles and later emerged in cities across the country. The Reagan administration hired staff to publicize the emergence of crack cocaine in 1985 as part of a strategic effort to build public and legislative support for the war. The media campaign was an extraordinary success. Almost overnight, the media was saturated with images of black “crack whores,” “crack dealers,” and “crack babies”—images that seemed to confirm the worst negative racial stereotypes about impoverished inner-city residents. The media bonanza surrounding the “new demon drug” helped to catapult the War on Drugs from an ambitious federal policy to an actual war.

The timing of the crack crisis helped to fuel conspiracy theories and general speculation in poor black communities that the War on Drugs was part of a genocidal plan by the government to destroy black people in the United States. From the outset, stories circulated on the street that crack and other drugs were being brought into black neighborhoods by the CIA. Eventually,
even the Urban League came to take the claims of genocide seriously. In its 1990 report "The State of Black America," it stated: "There is at least one concept that must be recognized if one is to see the pervasive and insidious nature of the drug problem for the African American community. Though difficult to accept, that is the concept of genocide." While the conspiracy theories were initially dismissed as far-fetched, if not downright loony, the word on the street turned out to be right, at least to a point. The CIA admitted in 1998 that guerrilla armies it actively supported in Nicaragua were smuggling illegal drugs into the United States—drugs that were making their way onto the streets of inner-city black neighborhoods in the form of crack cocaine. The CIA also admitted that, in the midst of the War on Drugs, it blocked law enforcement efforts to investigate illegal drug networks that were helping to fund its covert war in Nicaragua.5

It bears emphasis that the CIA never admitted (nor has any evidence been revealed to support the claim) that it intentionally sought the destruction of the black community by allowing illegal drugs to be smuggled into the United States. Nonetheless, conspiracy theorists surely must be forgiven for their bold accusation of genocide, in light of the devastation wrought by crack cocaine and the drug war, and the odd coincidence that an illegal drug crisis suddenly appeared in the black community after—not before—a drug war had been declared. In fact, the War on Drugs began at a time when illegal drug use was on the decline.6 During this same time period, however, a war was declared, causing arrests and convictions for drug offenses to skyrocket, especially among people of color.

The impact of the drug war has been astounding. In less than thirty years, the U.S penal population exploded from around 300,000 to more than 2 million, with drug convictions accounting for the majority of the increase.7 The United States now has the highest rate of incarceration in the world, dwarfing the rates of nearly every developed country, even surpassing those in highly repressive regimes like Russia, China, and Iran. In Germany, 93 people are in prison for every 100,000 adults and children. In the United States, the rate is roughly eight times that, or 750 per 100,000.8

The racial dimension of mass incarceration is its most striking feature. No other country in the world imprisons so many of its racial or ethnic minorities. The United States imprisons a larger percentage of its black population than South Africa did at the height of apartheid. In Washington, D.C., our nation's capitol, it is estimated that three out of four young black men (and
nearly all those in the poorest neighborhoods) can expect to serve time in prison.\textsuperscript{9} Similar rates of incarceration can be found in black communities across America.

These stark racial disparities cannot be explained by rates of drug crime. Studies show that people of all colors use and sell illegal drugs at remarkably similar rates.\textsuperscript{10} If there are significant differences in the surveys to be found, they frequently suggest that whites, particularly white youth, are more likely to engage in drug crime than people of color.\textsuperscript{11} That is not what one would guess, however, when entering our nation's prisons and jails, which are overflowing with black and brown drug offenders. In some states, black men have been admitted to prison on drug charges at rates twenty to fifty times greater than those of white men.\textsuperscript{12} And in major cities wracked by the drug war, as many as 80 percent of young African American men now have criminal records and are thus subject to legalized discrimination for the rest of their lives.\textsuperscript{13} These young men are part of a growing undercaste, permanently locked up and locked out of mainstream society.

It may be surprising to some that drug crime was declining, not rising, when a drug war was declared. From a historical perspective, however, the lack of correlation between crime and punishment is nothing new. Sociologists have frequently observed that governments use punishment primarily as a tool of social control, and thus the extent or severity of punishment is often unrelated to actual crime patterns. Michael Tonry explains in *Thinking About Crime*: "Governments decide how much punishment they want, and these decisions are in no simple way related to crime rates."\textsuperscript{14} This fact, he points out, can be seen most clearly by putting crime and punishment in comparative perspective. Although crime rates in the United States have not been markedly higher than those of other Western countries, the rate of incarceration has soared in the United States while it has remained stable or declined in other countries. Between 1960 and 1990, for example, official crime rates in Finland, Germany, and the United States were close to identical. Yet the U.S. incarceration rate quadrupled, the Finnish rate fell by 60 percent, and the German rate was stable in that period.\textsuperscript{15} Despite similar crime rates, each government chose to impose different levels of punishment.

Today, due to recent declines, U.S. crime rates have dipped below the international norm. Nevertheless, the United States now boasts an incarceration
rate that is six to ten times greater than that of other industrialized nations—a development directly traceable to the drug war. The only country in the world that even comes close to the American rate of incarceration is Russia, and no other country in the world incarcерates such an astonishing percentage of its racial or ethnic minorities.

The stark and sobering reality is that, for reasons largely unrelated to actual crime trends, the American penal system has emerged as a system of social control unparalleled in world history. And while the size of the system alone might suggest that it would touch the lives of most Americans, the primary targets of its control can be defined largely by race. This is an astonishing development, especially given that as recently as the mid-1970s, the most well-respected criminologists were predicting that the prison system would soon fade away. Prison did not deter crime significantly, many experts concluded. Those who had meaningful economic and social opportunities were unlikely to commit crimes regardless of the penalty, while those who went to prison were far more likely to commit crimes again in the future. The growing consensus among experts was perhaps best reflected by the National Advisory Commission on Criminal Justice Standards and Goals, which issued a recommendation in 1973 that “no new institutions for adults should be built and existing institutions for juveniles should be closed.”

This recommendation was based on their finding that “the prison, the reformatory and the jail have achieved only a shocking record of failure. There is overwhelming evidence that these institutions create crime rather than prevent it.”

These days, activists who advocate “a world without prisons” are often dismissed as quacks, but only a few decades ago, the notion that our society would be much better off without prisons—and that the end of prisons was more or less inevitable—not only dominated mainstream academic discourse in the field of criminology but also inspired a national campaign by reformers demanding a moratorium on prison construction. Marc Mauer, the executive director of the Sentencing Project, notes that what is most remarkable about the moratorium campaign in retrospect is the context of imprisonment at the time. In 1972, fewer than 350,000 people were being held in prisons and jails nationwide, compared with more than 2 million people today. The rate of incarceration in 1972 was at a level so low that it no longer seems in the realm of possibility, but for moratorium supporters,
that magnitude of imprisonment was egregiously high. "Supporters of the
moratorium effort can be forgiven for being so naive," Mauer suggests, "since
the prison expansion that was about to take place was unprecedented in hu-
man history." No one imagined that the prison population would more
than quintuple in their lifetime. It seemed far more likely that prisons would
fade away.

Far from fading away, it appears that prisons are here to stay. And despite the
unprecedented levels of incarceration in the African American community,
the civil rights community is oddly quiet. One in three young African Ameri-
can men will serve time in prison if current trends continue, and in some
cities more than half of all young adult black men are currently under cor-
rectional control—in prison or jail, on probation or parole. Yet mass incar-
ceration tends to be categorized as a criminal justice issue as opposed to a
racial justice or civil rights issue (or crisis).

The attention of civil rights advocates has been largely devoted to other
issues, such as affirmative action. During the past twenty years, virtually
every progressive, national civil rights organization in the country has mobi-
lized and rallied in defense of affirmative action. The struggle to preserve
affirmative action in higher education, and thus maintain diversity in the na-
tion's most elite colleges and universities, has consumed much of the atten-
tion and resources of the civil rights community and dominated racial justice
discourse in the mainstream media, leading the general public to believe
that affirmative action is the main battlefront in U.S. race relations—even
as our prisons fill with black and brown men.

My own experience reflects this dynamic. When I first joined the ACLU,
no one imagined that the Racial Justice Project would focus its attention on
criminal justice reform. The ACLU was engaged in important criminal justice
reform work, but no one suspected that work would eventually become cen-
tral to the agenda of the Racial Justice Project. The assumption was that the
project would concentrate its efforts on defending affirmative action. Shortly
after leaving the ACLU, I joined the board of directors of the Lawyers' Com-
mittee for Civil Rights of the San Francisco Bay Area. Although the organiza-
tion included racial justice among its core priorities, reform of the criminal
justice system was not a major part of its racial justice work. It was not alone.

In January 2008, the Leadership Conference on Civil Rights—an organiza-
tion composed of the leadership of more than 180 civil rights organizations—sent a letter to its allies and supporters informing them of a major initiative to document the voting record of members of Congress. The letter explained that its forthcoming report would show "how each representative and senator cast his or her vote on some of the most important civil rights issues of 2007, including voting rights, affirmative action, immigration, nominations, education, hate crimes, employment, health, housing, and poverty." Criminal justice issues did not make the list. That same broad-based coalition organized a major conference in October 2007, entitled Why We Can't Wait: Reversing the Retreat on Civil Rights, which included panels discussing school integration, employment discrimination, housing and lending discrimination, economic justice, environmental justice, disability rights, age discrimination, and immigrants' rights. Not a single panel was devoted to criminal justice reform.

The elected leaders of the African American community have a much broader mandate than civil rights groups, but they, too, frequently overlook criminal justice. In January 2009, for example, the Congressional Black Caucus sent a letter to hundreds of community and organization leaders who have worked with the caucus over the years, soliciting general information about them and requesting that they identify their priorities. More than thirty-five topics were listed as areas of potential special interest, including taxes, defense, immigration, agriculture, housing, banking, higher education, multimedia, transportation and infrastructure, women, seniors, nutrition, faith initiatives, civil rights, census, economic security, and emerging leaders. No mention was made of criminal justice. "Re-entry" was listed, but a community leader who was interested in criminal justice reform had to check the box labeled "other."

This is not to say that important criminal justice reform work has not been done. Civil rights advocates have organized vigorous challenges to specific aspects of the new caste system. One notable example is the successful challenge led by the NAACP Legal Defense Fund to a racist drug sting operation in Tulia, Texas. The 1999 drug bust incarcerated almost 15 percent of the black population of the town, based on the uncorroborated false testimony of a single informant hired by the sheriff of Tulia. More recently, civil rights groups around the country have helped to launch legal attacks and vibrant grassroots campaigns against felon disenfranchisement laws and
have strenuously opposed discriminatory crack sentencing laws and guidelines, as well as “zero tolerance” policies that effectively funnel youth of color from schools to jails. The national ACLU recently developed a racial justice program that includes criminal justice issues among its core priorities and has created a promising Drug Law Reform Project. And thanks to the aggressive advocacy of the ACLU, NAACP, and other civil rights organizations around the country, racial profiling is widely condemned, even by members of law enforcement who once openly embraced the practice.

Still, despite these significant developments, there seems to be a lack of appreciation for the enormity of the crisis at hand. There is no broad-based movement brewing to end mass incarceration and no advocacy effort that approaches in scale the fight to preserve affirmative action. There also remains a persistent tendency in the civil rights community to treat the criminal justice system as just another institution infected with lingering racial bias. The NAACP’s website offers one example. As recently as May 2008, one could find a brief introduction to the organization’s criminal justice work in the section entitled Legal Department. The introduction explained that “despite the civil rights victories of our past, racial prejudice still pervades the criminal justice system.” Visitors to the website were urged to join the NAACP in order to “protect the hard-earned civil rights gains of the past three decades.” No one visiting the website would learn that the mass incarceration of African Americans had already eviscerated many of the hard-earned gains it urged its members to protect.

Imagine if civil rights organizations and African American leaders in the 1940s had not placed Jim Crow segregation at the forefront of their racial justice agenda. It would have seemed absurd, given that racial segregation was the primary vehicle of racialized social control in the United States during that period. This book argues that mass incarceration is, metaphorically, the New Jim Crow and that all those who care about social justice should fully commit themselves to dismantling this new racial caste system. Mass incarceration—not attacks on affirmative action or lax civil rights enforcement—is the most damaging manifestation of the backlash against the Civil Rights Movement. The popular narrative that emphasizes the death of slavery and Jim Crow and celebrates the nation’s “triumph over race” with the election of Barack Obama, is dangerously misguided. The colorblind public consensus that prevails in America today—i.e., the widespread belief that
race no longer matters—has blinded us to the realities of race in our society and facilitated the emergence of a new caste system.

Clearly, much has changed in my thinking about the criminal justice system since I passed that bright orange poster stapled to a telephone pole ten years ago. For me, the new caste system is now as obvious as my own face in the mirror. Like an optical illusion—one in which the embedded image is impossible to see until its outline is identified—the new caste system lurks invisibly within the maze of rationalizations we have developed for persistent racial inequality. It is possible—quite easy, in fact—never to see the embedded reality. Only after years of working on criminal justice reform did my own focus finally shift, and then the rigid caste system slowly came into view. Eventually it became obvious. Now it seems odd that I could not see it before.

Knowing as I do the difficulty of seeing what most everyone insists does not exist, I anticipate that this book will be met with skepticism or something worse. For some, the characterization of mass incarceration as a “racial caste system” may seem like a gross exaggeration, if not hyperbole. Yes, we may have “classes” in the United States—vaguely defined upper, middle, and lower classes—and we may even have an “underclass” (a group so estranged from mainstream society that it is no longer in reach of the mythical ladder of opportunity), but we do not, many will insist, have anything in this country that resembles a “caste.”

The aim of this book is not to venture into the long-running, vigorous debate in the scholarly literature regarding what does and does not constitute a caste system. I use the term racial caste in this book the way it is used in common parlance to denote a stigmatized racial group locked into an inferior position by law and custom. Jim Crow and slavery were caste systems. So is our current system of mass incarceration.

It may be helpful, in attempting to understand the basic nature of the new caste system, to think of the criminal justice system—the entire collection of institutions and practices that comprise it—not as an independent system but rather as a gateway into a much larger system of racial stigmatization and permanent marginalization. This larger system, referred to here as mass incarceration, is a system that locks people not only behind actual bars in actual prisons, but also behind virtual bars and virtual walls—walls that are invisible to the naked eye but function nearly as effectively as Jim Crow laws
once did at locking people of color into a permanent second-class citizenship. The term mass incarceration refers not only to the criminal justice system but also to the larger web of laws, rules, policies, and customs that control those labeled criminals both in and out of prison. Once released, former prisoners enter a hidden underworld of legalized discrimination and permanent social exclusion. They are members of America’s new undercaste.

The language of caste may well seem foreign or unfamiliar to some. Public discussions about racial caste in America are relatively rare. We avoid talking about caste in our society because we are ashamed of our racial history. We also avoid talking about race. We even avoid talking about class. Conversations about class are resisted in part because there is a tendency to imagine that one’s class reflects upon one’s character. What is key to America’s understanding of class is the persistent belief—despite all evidence to the contrary—that anyone, with the proper discipline and drive, can move from a lower class to a higher class. We recognize that mobility may be difficult, but the key to our collective self-image is the assumption that mobility is always possible, so failure to move up reflects on one’s character. By extension, the failure of a race or ethnic group to move up reflects very poorly on the group as a whole.

What is completely missed in the rare public debates today about the plight of African Americans is that a huge percentage of them are not free to move up at all. It is not just that they lack opportunity, attend poor schools, or are plagued by poverty. They are barred by law from doing so. And the major institutions with which they come into contact are designed to prevent their mobility. To put the matter starkly: The current system of control permanently locks a huge percentage of the African American community out of the mainstream society and economy. The system operates through our criminal justice institutions, but it functions more like a caste system than a system of crime control. Viewed from this perspective, the so-called underclass is better understood as an undercaste—a lower caste of individuals who are permanently barred by law and custom from mainstream society. Although this new system of racialized social control purports to be colorblind, it creates and maintains racial hierarchy much as earlier systems of control did. Like Jim Crow (and slavery), mass incarceration operates as a tightly networked system of laws, policies, customs, and institutions that operate collectively to ensure the subordinate status of a group defined largely by race.
This argument may be particularly hard to swallow given the election of Barack Obama. Many will wonder how a nation that just elected its first black president could possibly have a racial caste system. It’s a fair question. But as discussed in chapter 6, there is no inconsistency whatsoever between the election of Barack Obama to the highest office in the land and the existence of a racial caste system in the era of colorblindness. The current system of control depends on black exceptionalism; it is not disproved or undermined by it. Others may wonder how a racial caste system could exist when most Americans—of all colors—oppose race discrimination and endorse colorblindness. Yet as we shall see in the pages that follow, racial caste systems do not require racial hostility or overt bigotry to thrive. They need only racial indifference, as Martin Luther King Jr. warned more than forty-five years ago.

The recent decisions by some state legislatures, most notably New York’s, to repeal or reduce mandatory drug sentencing laws have led some to believe that the system of racial control described in this book is already fading away. Such a conclusion, I believe, is a serious mistake. Many of the states that have reconsidered their harsh sentencing schemes have done so not out of concern for the lives and families that have been destroyed by these laws or the racial dimensions of the drug war, but out of concern for bursting state budgets in a time of economic recession. In other words, the racial ideology that gave rise to these laws remains largely undisturbed. Changing economic conditions or rising crime rates could easily result in a reversal of fortunes for those who commit drug crimes, particularly if the drug criminals are perceived to be black and brown. Equally important to understand is this: Merely reducing sentence length, by itself, does not disturb the basic architecture of the New Jim Crow. So long as large numbers of African Americans continue to be arrested and labeled drug criminals, they will continue to be relegated to a permanent second-class status upon their release, no matter how much (or how little) time they spend behind bars. The system of mass incarceration is based on the prison label, not prison time.

Skepticism about the claims made here is warranted. There are important differences, to be sure, among mass incarceration, Jim Crow, and slavery—the three major racialized systems of control adopted in the United States to date. Failure to acknowledge the relevant differences, as well as their implications, would be a disservice to racial justice discourse. Many of the differences are not as dramatic as they initially appear, however; others serve
to illustrate the ways in which systems of racialized social control have managed to morph, evolve, and adapt to changes in the political, social, and legal context over time. Ultimately, I believe that the similarities between these systems of control overwhelm the differences and that mass incarceration, like its predecessors, has been largely immunized from legal challenge. If this claim is substantially correct, the implications for racial justice advocacy are profound.

With the benefit of hindsight, surely we can see that piecemeal policy reform or litigation alone would have been a futile approach to dismantling Jim Crow segregation. While those strategies certainly had their place, the Civil Rights Act of 1964 and the concomitant cultural shift would never have occurred without the cultivation of a critical political consciousness in the African American community and the widespread, strategic activism that flowed from it. Likewise, the notion that the New Jim Crow can ever be dismantled through traditional litigation and policy-reform strategies that are wholly disconnected from a major social movement seems fundamentally misguided.

Such a movement is impossible, though, if those most committed to abolishing racial hierarchy continue to talk and behave as if a state-sponsored racial caste system no longer exists. If we continue to tell ourselves the popular myths about racial progress or, worse yet, if we say to ourselves that the problem of mass incarceration is just too big, too daunting for us to do anything about and that we should instead direct our energies to battles that might be more easily won, history will judge us harshly. A human rights nightmare is occurring on our watch.

A new social consensus must be forged about race and the role of race in defining the basic structure of our society, if we hope ever to abolish the New Jim Crow. This new consensus must begin with dialogue, a conversation that fosters a critical consciousness, a key prerequisite to effective social action. This book is an attempt to ensure that the conversation does not end with nervous laughter.

It is not possible to write a relatively short book that explores all aspects of the phenomenon of mass incarceration and its implications for racial justice. No attempt has been made to do so here. This book paints with a broad brush, and as a result, many important issues have not received the attention they deserve. For example, relatively little is said here about the unique
experience of women, Latinos, and immigrants in the criminal justice system, though these groups are particularly vulnerable to the worst abuses and suffer in ways that are important and distinct. This book focuses on the experience of African American men in the new caste system. I hope other scholars and advocates will pick up where the book leaves off and develop the critique more fully or apply the themes sketched here to other groups and other contexts.

What this book is intended to do—the only thing it is intended to do—is to stimulate a much-needed conversation about the role of the criminal justice system in creating and perpetuating racial hierarchy in the United States. The fate of millions of people—indeed the future of the black community itself—may depend on the willingness of those who care about racial justice to re-examine their basic assumptions about the role of the criminal justice system in our society. The fact that more than half of the young black men in many large American cities are currently under the control of the criminal justice system (or saddled with criminal records) is not—as many argue—just a symptom of poverty or poor choices, but rather evidence of a new racial caste system at work.

Chapter 1 begins our journey. It briefly reviews the history of racialized social control in the United States, answering the basic question: How did we get here? The chapter describes the control of African Americans through racial caste systems, such as slavery and Jim Crow, which appear to die but then are reborn in new form, tailored to the needs and constraints of the time. As we shall see, there is a certain pattern to the births and deaths of racial caste in America. Time and again, the most ardent proponents of racial hierarchy have succeeded in creating new caste systems by triggering a collapse of resistance across the political spectrum. This feat has been achieved largely by appealing to the racism and vulnerability of lower-class whites, a group of people who are understandably eager to ensure that they never find themselves trapped at the bottom of the American totem pole. This pattern, dating back to slavery, has birthed yet another racial caste system in the United States: mass incarceration.

The structure of mass incarceration is described in some detail in chapter 2, with a focus on the War on Drugs. Few legal rules meaningfully constrain the police in the drug war, and enormous financial incentives have been granted to law enforcement to engage in mass drug arrests through military-style tactics. Once swept into the system, one's chances of ever being truly
free are slim, often to the vanishing point. Defendants are typically denied meaningful legal representation, pressured by the threat of lengthy sentences into a plea bargain, and then placed under formal control—in prison or jail, on probation or parole. Upon release, ex-offenders are discriminated against, legally, for the rest of their lives, and most will eventually return to prison. They are members of America’s new undercaste.

Chapter 3 turns our attention to the role of race in the U.S. criminal justice system. It describes the method to the madness—how a formally race neutral criminal justice system can manage to round up, arrest, and imprison an extraordinary number of black and brown men, when people of color are actually no more likely to be guilty of drug crimes and many other offenses than whites. This chapter debunks the notion that rates of black imprisonment can be explained by crime rates and identifies the huge racial disparities at every stage of the criminal justice process—from the initial stop search, and arrest to the plea bargaining and sentencing phases. In short the chapter explains how the legal rules that structure the system guarantee discriminatory results. These legal rules ensure that the undercaste is overwhelmingly black and brown.

Chapter 4 considers how the caste system operates once people are released from prison. In many respects, release from prison does not represent the beginning of freedom but instead a cruel new phase of stigmatization and control. Myriad laws, rules, and regulations discriminate against ex-offenders and effectively prevent their meaningful re-integration into the mainstream economy and society. I argue that the shame and stigma of the “prison label” is, in many respects, more damaging to the African American community than the shame and stigma associated with Jim Crow. The criminalization and demonization of black men has turned the black community against itself, unraveling community and family relationships, decimating networks of mutual support, and intensifying the shame and self-hate experienced by the current pariah caste.

The many parallels between mass incarceration and Jim Crow are explored in chapter 5. The most obvious parallel is legalized discrimination. Like Jim Crow, mass incarceration marginalizes large segments of the African American community, segregates them physically (in prisons, jails, and ghettos), and then authorizes discrimination against them in voting, employment, housing, education, public benefits, and jury service. The federal court system has effectively immunized the current system from challenges on the
grounds of racial bias, much as earlier systems of control were protected and endorsed by the U.S. Supreme Court. The parallels do not end there, however. Mass incarceration, like Jim Crow, helps to define the meaning and significance of race in America. Indeed, the stigma of criminality functions in much the same way that the stigma of race once did. It justifies a legal, social, and economic boundary between “us” and “them.” Chapter 5 also explores some of the differences among slavery, Jim Crow, and mass incarceration, most significantly the fact that mass incarceration is designed to warehouse a population deemed disposable—unnecessary to the functioning of the new global economy—while earlier systems of control were designed to exploit and control black labor. In addition, the chapter discusses the experience of white people in this new caste system; although they have not been the primary targets of the drug war, they have been harmed by it—a powerful illustration of how a racial state can harm people of all colors. Finally, this chapter responds to skeptics who claim that mass incarceration cannot be understood as a racial caste system because many “get tough on crime” policies are supported by African Americans. Many of these claims, I note, are no more persuasive today than arguments made a hundred years ago by blacks and whites who claimed that racial segregation simply reflected “reality,” not racial animus, and that African Americans would be better off not challenging the Jim Crow system but should focus instead on improving themselves within it. Throughout our history, there have been African Americans who, for a variety of reasons, have defended or been complicit with the prevailing system of control.

Chapter 6 reflects on what acknowledging the presence of the New Jim Crow means for the future of civil rights advocacy. I argue that nothing short of a major social movement can successfully dismantle the new caste system. Meaningful reforms can be achieved without such a movement, but unless the public consensus supporting the current system is completely overturned, the basic structure of the new caste system will remain intact. Building a broad-based social movement, however, is not enough. It is not nearly enough to persuade mainstream voters that we have relied too heavily on incarceration or that drug abuse is a public health problem, not a crime. If the movement that emerges to challenge mass incarceration fails to confront squarely the critical role of race in the basic structure of our society, and if it fails to cultivate an ethic of genuine care, compassion, and concern for every human being—of every class, race, and nationality—within our
nation's borders (including poor whites, who are often pitted against poor people of color), the collapse of mass incarceration will not mean the death of racial caste in America. Inevitably a new system of racialized social control will emerge—one that we cannot foresee, just as the current system of mass incarceration was not predicted by anyone thirty years ago. No task is more urgent for racial justice advocates today than ensuring that America's current racial caste system is its last.
The Lockdown

We may think we know how the criminal justice system works. Television is overloaded with fictional dramas about police, crime, and prosecutors—shows such as *Law & Order*. These fictional dramas, like the evening news, tend to focus on individual stories of crime, victimization, and punishment, and the stories are typically told from the point of view of law enforcement. A charismatic police officer, investigator, or prosecutor struggles with his own demons while heroically trying to solve a horrible crime. He ultimately achieves a personal and moral victory by finding the bad guy and throwing him in jail. That is the made-for-TV version of the criminal justice system. It perpetuates the myth that the primary function of the system is to keep our streets safe and our homes secure by rooting out dangerous criminals and punishing them. These television shows, especially those that romanticize drug-law enforcement, are the modern-day equivalent of the old movies portraying happy slaves, the fictional gloss placed on a brutal system of racialized oppression and control.

Those who have been swept within the criminal justice system know that the way the system actually works bears little resemblance to what happens on television or in movies. Full-blown trials of guilt or innocence rarely occur; many people never even meet with an attorney; witnesses are routinely paid and coerced by the government; police regularly stop and search people for no reason whatsoever; penalties for many crimes are so severe that innocent people plead guilty, accepting plea bargains to avoid harsh mandatory sentences; and children, even as young as fourteen, are sent to adult prisons.
Rules of law and procedure, such as “guilt beyond a reasonable doubt” or “probable cause” or “reasonable suspicion,” can easily be found in court cases and law-school textbooks but are much harder to find in real life.

In this chapter, we shall see how the system of mass incarceration actually works. Our focus is the War on Drugs. The reason is simple: Convictions for drug offenses are the single most important cause of the explosion in incarceration rates in the United States. Drug offenses alone account for two-thirds of the rise in the federal inmate population and more than half of the rise in state prisoners between 1985 and 2000.¹ Approximately a half-million people are in prison or jail for a drug offense today, compared to an estimated 41,100 in 1980—an increase of 1,100 percent.² Drug arrests have tripled since 1980. As a result, more than 31 million people have been arrested for drug offenses since the drug war began.³ To put the matter in perspective, consider this: there are more people in prisons and jails today just for drug offenses than were incarcerated for all reasons in 1980.⁴ Nothing has contributed more to the systematic mass incarceration of people of color in the United States than the War on Drugs.

Before we begin our tour of the drug war, it is worthwhile to get a couple of myths out of the way. The first is that the war is aimed at ridding the nation of drug “kingpins” or big-time dealers. Nothing could be further from the truth. The vast majority of those arrested are not charged with serious offenses. In 2005, for example, four out of five drug arrests were for possession, and only one out of five was for sales. Moreover, most people in state prison for drug offenses have no history of violence or significant selling activity.⁵

The second myth is that the drug war is principally concerned with dangerous drugs. Quite to the contrary, arrests for marijuana possession—a drug less harmful than tobacco or alcohol—accounted for nearly 80 percent of the growth in drug arrests in the 1990s.⁶ Despite the fact that most drug arrests are for nonviolent minor offenses, the War on Drugs has ushered in an era of unprecedented punitiveness.

The percentage of drug arrests that result in prison sentences (rather than dismissal, community service, or probation) has quadrupled, resulting in a prison-building boom the likes of which the world has never seen. In two short decades, between 1980 and 2000, the number of people incarcerated in our nation’s prisons and jails soared from roughly 300,000 to more than 2 million. By the end of 2007, more than 7 million Americans—or one in every 31 adults—were behind bars, on probation, or on parole.⁷
We begin our exploration of the drug war at the point of entry—arrest by the police—and then consider how the system of mass incarceration is structured to reward mass drug arrests and facilitate the conviction and imprisonment of an unprecedented number of Americans, whether guilty or innocent. In subsequent chapters, we will consider how the system specifically targets people of color and then relegates them to a second-class status analogous to Jim Crow. At this point, we simply take stock of the means by which the War on Drugs facilitates the roundup and lockdown of an extraordinary percentage of the U.S. population.

Rules of the Game

Few legal rules meaningfully constrain the police in the War on Drugs. This may sound like an overstatement, but upon examination it proves accurate. The absence of significant constraints on the exercise of police discretion is a key feature of the drug war’s design. It has made the roundup of millions of Americans for nonviolent drug offenses relatively easy.

With only a few exceptions, the Supreme Court has seized every opportunity to facilitate the drug war, primarily by eviscerating Fourth Amendment protections against unreasonable searches and seizures by the police. The rollback has been so pronounced that some commentators charge that a virtual “drug exception” now exists to the Bill of Rights. Shortly before his death, Justice Thurgood Marshall felt compelled to remind his colleagues that there is, in fact, “no drug exception” written into the text of the Constitution.9

Most Americans do not know what the Fourth Amendment of the U.S. Constitution actually says or what it requires of the police. It states, in its entirety:

The right of the people to be secure in their persons, houses, papers, and effects, against unreasonable searches and seizures, shall not be violated, and no warrants shall issue, but upon probable cause, supported by oath or affirmation, and particularly describing the place to be searched, and the person or things to be seized.

Courts and scholars agree that the Fourth Amendment governs all searches and seizures by the police and that the amendment was adopted in response
to the English practice of conducting arbitrary searches under general warrants to uncover seditious libels. The routine police harassment, arbitrary searches, and widespread police intimidation of those subject to English rule helped to inspire the American Revolution. Not surprisingly, then, preventing arbitrary searches and seizures by the police was deemed by the Founding Fathers an essential element of the U.S. Constitution. Until the War on Drugs, courts had been fairly stringent about enforcing the Fourth Amendment's requirements.

Within a few years after the drug war was declared, however, many legal scholars noted a sharp turn in the Supreme Court's Fourth Amendment jurisprudence. By the close of the Supreme Court's 1990–91 term, it had become clear that a major shift in the relationship between the citizens of this country and the police was under way. Justice Stevens noted the trend in a powerful dissent issued in California v. Acevedo, a case upholding the warrantless search of a bag locked in a motorist's trunk:

In the years [from 1982 to 1991], the Court has heard argument in 30 Fourth Amendment cases involving narcotics. In all but one, the government was the petitioner. All save two involved a search or seizure without a warrant or with a defective warrant. And, in all except three, the Court upheld the constitutionality of the search or seizure. In the meantime, the flow of narcotics cases through the courts has steadily and dramatically increased. No impartial observer could criticize this Court for hindering the progress of the war on drugs. On the contrary, decisions like the one the Court makes today will support the conclusion that this Court has become a loyal foot soldier in the Executive's fight against crime.9

The Fourth Amendment is but one example. Virtually all constitutionally protected civil liberties have been undermined by the drug war. The Court has been busy in recent years approving mandatory drug testing of employees and students, upholding random searches and sweeps of public schools and students, permitting police to obtain search warrants based on an anonymous informant's tip, expanding the government's wiretapping authority, legitimating the use of paid, unidentified informants by police and prosecutors, approving the use of helicopter surveillance of homes without a warrant, and allowing the forfeiture of cash, homes, and other property based on unproven allegations of illegal drug activity.
For our purposes here, we limit our focus to the legal rules crafted by the Supreme Court that grant law enforcement a pecuniary interest in the drug war and make it relatively easy for the police to seize people virtually anywhere—on public streets and sidewalks, on buses, airplanes and trains, or any other public place—and usher them behind bars. These new legal rules have ensured that anyone, virtually anywhere, for any reason, can become a target of drug-law enforcement activity.

Unreasonable Suspicion

Once upon a time, it was generally understood that the police could not stop and search someone without a warrant unless there was probable cause to believe that the individual was engaged in criminal activity. That was a basic Fourth Amendment principle. In Terry v. Ohio, decided in 1968, the Supreme Court modified that understanding, but only modestly, by ruling that if and when a police officer observes unusual conduct by someone the officer reasonably believes to be dangerous and engaged in criminal activity, the officer “is entitled for the protection of himself and others in the area” to conduct a limited search “to discover weapons that might be used against the officer.”10 Known as the stop-and-frisk rule, the Terry decision stands for the proposition that, so long as a police officer has “reasonable articulable suspicion” that someone is engaged in criminal activity and dangerous, it is constitutionally permissible to stop, question, and frisk him or her—even in the absence of probable cause.

Justice Douglas dissented in Terry on the grounds that “grant[ing] police greater power than a magistrate [judge] is to take a long step down the totalitarian path.”11 He objected to the notion that police should be free to conduct warrantless searches whenever they suspect someone is a criminal, believing that dispensing with the Fourth Amendment’s warrant requirement risked opening the door to the same abuses that gave rise to the American Revolution. His voice was a lonely one. Most commentators at the time agreed that affording police the power and discretion to protect themselves during an encounter with someone they believed to be a dangerous criminal is not “unreasonable” under the Fourth Amendment.

History suggests Justice Douglas had the better of the argument. In the years since Terry, stops, interrogations, and searches of ordinary people
driving down the street, walking home from the bus stop, or riding the train, have become commonplace—at least for people of color. As Douglas suspected, the Court in Terry had begun its slide down a very slippery slope. Today it is no longer necessary for the police to have any reason to believe that people are engaged in criminal activity or actually dangerous to stop and search them. As long as you give “consent,” the police can stop, interrogate, and search you for any reason or no reason at all.

Just Say No

The first major sign that the Supreme Court would not allow the Fourth Amendment to interfere with the prosecution of the War on Drugs came in Florida v. Bostick. In that case, Terrance Bostick, a twenty-eight-year-old African American, had been sleeping in the back seat of a Greyhound bus on his way from Miami to Atlanta. Two police officers, wearing bright green “raid” jackets and displaying their badges and a gun, woke him with a start. The bus was stopped for a brief layover in Fort Lauderdale, and the officers were “working the bus,” looking for persons who might be carrying drugs. Bostick provided them with his identification and ticket, as requested. The officers then asked to search his bag. Bostick complied, even though he knew his bag contained a pound of cocaine. The officers had no basis for suspecting Bostick of any criminal activity, but they got lucky. They arrested Bostick, and he was charged and convicted of trafficking cocaine.

Bostick’s search and seizure reflected what had become an increasingly common tactic in the War on Drugs: suspicionless police sweeps of buses in interstate or intrastate travel. The resulting “interviews” of passengers in these dragnet operations usually culminate in a request for “consent” to search the passenger’s luggage. Never do the officers inform passengers that they are free to remain silent or to refuse to answer questions. By proceeding systematically in this manner, the police are able to engage in an extremely high volume of searches. One officer was able to search over three thousand bags in a nine-month period employing these techniques. By and large, however, the hit rates are low. For example, in one case, a sweep of one hundred buses resulted in only seven arrests.

On appeal, the Florida Supreme Court ruled in Bostick’s case that the police officer’s conduct violated the Fourth Amendment’s prohibition of unreasonable
searches and seizures. The Fourth Amendment, the court reasoned, forbids the police from seizing people and searching them without some individualized suspicion that they have committed or are committing a crime. The court thus overturned Bostick's conviction, ruling that the cocaine, having been obtained illegally, was inadmissible. It also broadly condemned “bus sweeps” in the drug war, comparing them to methods employed by totalitarian regimes:

The evidence in this case has evoked images of other days, under other flags, when no man traveled his nation's roads or railways without fear of unwarranted interruption, by individuals who had temporary power in Government. . . . This is not Hitler's Berlin, nor Stalin's Moscow, nor is it white supremacist South Africa. Yet in Broward County, Florida, these police officers approach every person on board buses and trains (“that time permits”) and check identification, tickets, ask to search luggage—all in the name of “voluntary cooperation” with law enforcement.15

The U.S. Supreme Court reversed. The Court ruled that Bostick's encounter with the police was purely voluntary, and therefore he was not "seized" within the meaning of the Fourth Amendment. Even if Bostick did not feel free to leave when confronted by police at the back of the bus, the proper question, according to the Court, was whether "a reasonable person" in Bostick's shoes would have felt free to terminate the encounter. A reasonable person, the Court concluded, would have felt free to sit there and refuse to answer the police officer's questions, and would have felt free to tell the officer "No, you can't search my bag." Accordingly, Bostick was not really "seized" within the meaning of the Fourth Amendment, and the subsequent search was purely consensual. The Court made clear that its decision was to govern all future drug sweeps, no matter what the circumstances of the targeted individual. Given the blanket nature of the ruling, courts have found police encounters to be consensual in truly preposterous situations. For example, a few years after Bostick, the District of Columbia Court of Appeals applied the ruling to a case involving a fourteen-year-old girl interrogated by the police, concluding that she must be held to the same reasonable-person standard.16

Prior to the Bostick decision, a number of lower courts had found absurd the notion that "reasonable people" would feel empowered to refuse to answer
questions when confronted by the police. As federal judge Prentiss Marshall explained, "The average person encountered will feel obliged to stop and respond. Few will feel that they can walk away or refuse to answer."17 Professor Tracey Maclin put it this way: "Common sense teaches that most of us do not have the chutzpah or stupidity to tell a police officer to 'get lost' after he has stopped us and asked us for identification or questioned us about possible criminal conduct."18 Other courts emphasized that granting police the freedom to stop, interrogate, and search anyone who consented would likely lead to racial and ethnic discrimination. Young black men would be the likely targets, rather than older white women. Justice Thurgood Marshall acknowledged as much in his dissent in Bostick, noting "the basis of the decision to single out particular passengers during a suspicionless sweep is less likely to be inarticulable than unspeakable."19

Studies have shown that Maclin's common sense is correct: the overwhelming majority of people who are confronted by police and asked questions respond, and when asked to be searched, they comply.20 This is the case even among those, like Bostick, who have every reason to resist these tactics because they actually have something to hide. This is no secret to the Supreme Court. The Court long ago acknowledged that effective use of consent searches by the police depends on the ignorance (and powerlessness) of those who are targeted. In Schneckloth v. Bustamonte, decided in 1973, the Court admitted that if waiver of one's right to refuse consent were truly "knowing, intelligent, and voluntary," it would "in practice create serious doubt whether consent searches would continue to be conducted."21 In other words, consent searches are valuable tools for the police only because hardly anyone dares to say no.

**Poor Excuse**

So-called consent searches have made it possible for the police to stop and search just about anybody walking down the street for drugs. All a police officer has to do in order to conduct a baseless drug investigation is ask to speak with someone and then get their "consent" to be searched. So long as orders are phrased as a question, compliance is interpreted as consent. "May I speak to you?" thunders an officer. "Will you put your arms up and stand
against the wall for a search?" Because almost no one refuses, drug sweeps on the sidewalk (and on buses and trains) are easy. People are easily intimi-
dated when the police confront them, hands on their revolvers, and most have no idea the question can be answered, "No." But what about all the people driving down the street? How do police extract consent from them? The answer: pretext stops.

Like consent searches, pretext stops are favorite tools of law enforcement in the War on Drugs. A classic pretext stop is a traffic stop motivated not by any desire to enforce traffic laws, but instead motivated by a desire to hunt for drugs in the absence of any evidence of illegal drug activity. In other words, police officers use minor traffic violations as an excuse—a pretext—to search for drugs, even though there is not a shred of evidence suggesting the motorist is violating drug laws. Pretext stops, like consent searches, have received the Supreme Court's unequivocal blessing. Just ask Michael Whren and James Brown.

Whren and Brown, both of whom are African American, were stopped by plainclothes officers in an unmarked vehicle in June 1993. The police ad-
mitted to stopping Whren and Brown because they wanted to investigate them for imagined drug crimes, even though they did not have probable cause or reasonable suspicion such crimes had actually been committed. Lacking actual evidence of criminal activity, the officers decided to stop them based on a pretext—a traffic violation. The officers testified that the driver failed to use his turn signal and accelerated abruptly from a stop sign. Although the officers weren't really interested in the traffic violation, they stopped the pair anyway because they had a "hunch" they might be drug criminals. It turned out they were right. According to the officers, the driver had a bag of cocaine in his lap—allegedly in plain view.

On appeal, Whren and Brown challenged their convictions on the ground that pretextual stops violate the Fourth Amendment. They argued that, be-
cause of the multitude of applicable traffic and equipment regulations, and the difficulty of obeying all traffic rules perfectly at all times, the police will nearly always have an excuse to stop someone and go fishing for drugs. Any-
one driving more than a few blocks is likely to commit a traffic violation of some kind, such as failing to track properly between lanes, failing to stop at precisely the correct distance behind a crosswalk, failing to pause for pre-
cisely the right amount of time at a stop sign, or failing to use a turn signal
at the appropriate distance from an intersection. Allowing the police to use minor traffic violations as a pretext for baseless drug investigations would permit them to single out anyone for a drug investigation without any evidence of illegal drug activity whatsoever. That kind of arbitrary police conduct is precisely what the Fourth Amendment was intended to prohibit.

The Supreme Court rejected their argument, ruling that an officer's motivations are irrelevant when evaluating the reasonableness of police activity under the Fourth Amendment. It does not matter, the Court declared, why the police are stopping motorists under the Fourth Amendment, so long as some kind of traffic violation gives them an excuse. The fact that the Fourth Amendment was specifically adopted by the Founding Fathers to prevent arbitrary stops and searches was deemed unpersuasive. The Court ruled that the police are free to use minor traffic violations as a pretext to conduct drug investigations, even when there is no evidence of illegal drug activity.

A few months later, in Ohio v. Robinette, the Court took its twisted logic one step further. In that case, a police officer pulled over Robert Robinette, allegedly for speeding. After checking Robinette's license and issuing a warning (but no ticket), the officer then ordered Robinette out of his vehicle, turned on a video camera in the officer's car, and then asked Robinette whether he was carrying any drugs and would "consent" to a search. He did. The officer found a small amount of marijuana in Robinette's car, and a single pill, which turned out to be methamphetamine.

The Ohio Supreme Court, reviewing the case on appeal, was obviously uncomfortable with the blatant fishing expedition for drugs. The court noted that traffic stops were increasingly being used in the War on Drugs to extract "consent" for searches, and that motorists may not believe they are free to refuse consent and simply drive away. In an effort to provide some minimal protection for motorists, the Ohio court adopted a bright-line rule, that is, an unambiguous requirement that officers tell motorists they are free to leave before asking for consent to search their vehicles. At the very least, the justices reasoned, motorists should know they have the right to refuse consent and to leave, if they so choose.

The U.S. Supreme Court struck down this basic requirement as "unrealistic." In so doing, the Court made clear to all lower courts that, from now on, the Fourth Amendment should place no meaningful constraints on the police in the War on Drugs. No one needs to be informed of their rights dur-
ing a stop or search, and police may use minor traffic stops as well as the
myth of “consent” to stop and search anyone they choose for imaginary drug
crimes, whether or not any evidence of illegal drug activity actually exists.

One might imagine that the legal rules described thus far would provide
more than enough latitude for the police to engage in an all-out, no-holds-
barred war on drugs. But there’s more. Even if motorists, after being de-
tained and interrogated, have the nerve to refuse consent to a search, the
police can arrest them anyway. In Atwater v. City of Lago Vista, the Supreme
Court held that the police may arrest motorists for minor traffic violations
and throw them in jail (even if the statutory penalty for the traffic violation
is a mere fine, not jail time).

Another legal option for officers frustrated by a motorist’s refusal to grant
“consent” is to bring a drug-sniffing dog to the scene. This option is available
to police in traffic stops, as well as to law enforcement officials confronted
with resistant travelers in airports and in bus or train stations who refuse to
give the police consent to search their luggage. The Supreme Court has
ruled that walking a drug-sniffing dog around someone’s vehicle (or some-
one’s luggage) does not constitute a “search,” and therefore does not trigger
Fourth Amendment scrutiny. If the dog alerts to drugs, then the officer has
probable cause to search without the person’s consent. Naturally, in most
cases, when someone is told that a drug-sniffing dog will be called, the seized
individual backs down and “consents” to the search, as it has become apparent
that the police are determined to conduct the search one way or another.

Kissing Frogs

Court cases involving drug-law enforcement almost always involve guilty
people. Police usually release the innocent on the street—often without a
ticket, citation, or even an apology—so their stories are rarely heard in court.
Hardly anyone files a complaint, because the last thing most people want to
do after experiencing a frightening and intrusive encounter with the police
is show up at the police station where the officer works and attract more
attention to themselves. For good reason, many people—especially poor
people of color—fear police harassment, retaliation, and abuse. After hav-
ing your car torn apart by the police in a futile search for drugs, or being
forced to lie spread-eagled on the pavement while the police search you and interrogate you for no reason at all, how much confidence do you have in law enforcement? Do you expect to get a fair hearing? Those who try to find an attorney to represent them in a lawsuit often learn that unless they have broken bones (and no criminal record), private attorneys are unlikely to be interested in their case. Many people are shocked to discover that what happened to them on the side of the road was not, in fact, against the law.

The inevitable result is that the people who wind up in front of a judge are usually guilty of some crime. The parade of guilty people through America's courtrooms gives the false impression to the public—as well as to judges—that when the police have a "hunch," it makes sense to let them act on it. Judges tend to imagine the police have a sixth sense—or some kind of special police training—that qualifies them to identify drug criminals in the absence of any evidence. After all, they seem to be right so much of the time, don't they?

The truth, however, is that most people stopped and searched in the War on Drugs are perfectly innocent of any crime. The police have received no training that enhances the likelihood they will spot the drug criminals as they drive by and leave everyone else alone. To the contrary, tens of thousands of law enforcement officers have received training that guarantees precisely the opposite. The Drug Enforcement Agency (DEA) trains police to conduct utterly unreasonable and discriminatory stops and searches throughout the United States.

Perhaps the best known of these training programs is Operation Pipeline. The DEA launched Operation Pipeline in 1984 as part of the Reagan administration's rollout of the War on Drugs. The federal program, administered by over three hundred state and local law enforcement agencies, trains state and local law enforcement officers to use pretextual traffic stops and consent searches on a large scale for drug interdiction. Officers learn, among other things, how to use a minor traffic violation as a pretext to stop someone, how to lengthen a routine traffic stop and leverage it into a search for drugs, how to obtain consent from a reluctant motorist, and how to use drug-sniffing dogs to obtain probable cause. By 2000, the DEA had directly trained more than 25,000 officers in forty-eight states in Pipeline tactics and helped to develop training programs for countless municipal and state law enforcement agencies. In legal scholar Ricardo Bascuas's words, "Operation Pipeline is exactly what the Framers meant to prohibit: a
federally-run general search program that targets people without cause for suspicion, particularly those who belong to disfavored groups.24

The program’s success requires police to stop “staggering” numbers of people in shotgun fashion.25 This “volume” approach to drug enforcement sweeps up extraordinary numbers of innocent people. As one California Highway Patrol Officer said, “It’s sheer numbers... You’ve got to kiss a lot of frogs before you find a prince.”26 Accordingly, every year, tens of thousands of motorists find themselves stopped on the side of the road, fielding questions about imaginary drug activity, and then succumbing to a request for their vehicle to be searched—sometimes torn apart—in the search for drugs. Most of these stops and searches are futile. It has been estimated that 95 percent of Pipeline stops yield no illegal drugs.27 One study found that up to 99 percent of traffic stops made by federally funded narcotics task forces result in no citation and that 98 percent of task-force searches during traffic stops are discretionary searches in which the officer searches the car with the driver’s verbal “consent” but has no other legal authority to do so.28

The “drug-courier profiles” utilized by the DEA and other law enforcement agencies for drug sweeps on highways, as well as in airports and train stations, are notoriously unreliable. In theory, a drug-courier profile reflects the collective wisdom and judgment of a law enforcement agency’s officials. Instead of allowing each officer to rely on his or her own limited experience and biases in detecting suspicious behavior, a drug-courier profile affords every officer the advantage of the agency’s collective experience and expertise. However, as legal scholar David Cole has observed, “in practice, the drug-courier profile is a scattershot hodgepodge of traits and characteristics so expansive that it potentially justifies stopping anybody and everybody.”29

The profile can include traveling with luggage, traveling without luggage, driving an expensive car, driving a car that needs repairs, driving with out-of-state license plates, driving a rental car, driving with “mismatched occupants,” acting too calm, acting too nervous, dressing casually, wearing expensive clothing or jewelry, being one of the first to deplane, being one of the last to deplane, deplaning in the middle, paying for a ticket in cash, using large-denomination currency, using small-denomination currency, traveling alone, traveling with a companion, and so on. Even striving to obey the law fits the profile! The Florida Highway Patrol Drug Courier Profile cautioned troopers to be suspicious of “scrupulous obedience to traffic laws.”30 As Cole points out, “such profiles do not so much focus an investigation as
provide law enforcement officials a ready-made excuse for stopping whomever they please."31

The Supreme Court has allowed use of drug-courier profiles as guides for the exercise of police discretion. Although it has indicated that the mere fact that someone fits a profile does not automatically constitute reasonable suspicion justifying a stop, courts routinely defer to these profiles, and the Court has yet to object. As one judge said after conducting a review of drug-courier profile decisions: "Many courts have accepted the profile, as well as the Drug Enforcement Agency's scattershot enforcement efforts, unquestioningly, mechanistically, and dispositively."32

It Pays to Play

Clearly, the rules of the game are designed to allow for the roundup of an unprecedented number of Americans for minor, nonviolent drug offenses. The number of annual drug arrests more than tripled between 1980 and 2005, as drug sweeps and suspicionless stops and searches proceeded in record numbers.33

Still, it is fair to wonder why the police would choose to arrest such an astonishing percentage of the American public for minor drug crimes. The fact that police are legally allowed to engage in a wholesale roundup of nonviolent drug offenders does not answer the question why they would choose to do so, particularly when most police departments have far more serious crimes to prevent and solve. Why would police prioritize drug-law enforcement? Drug use and abuse is nothing new; in fact, it was on the decline, not on the rise, when the War on Drugs began. So why make drug-law enforcement a priority now?

Once again, the answer lies in the system's design. Every system of control depends for its survival on the tangible and intangible benefits that are provided to those who are responsible for the system's maintenance and administration. This system is no exception.

At the time the drug war was declared, illegal drug use and abuse was not a pressing concern in most communities. The announcement of a War on Drugs was therefore met with some confusion and resistance within law enforcement, as well as among some conservative commentators.34 The feder-
alization of drug crime violated the conservative tenet of states’ rights and local control, as street crime was typically the responsibility of local law enforcement. Many state and local law enforcement officials were less than pleased with the attempt by the federal government to assert itself in local crime fighting, viewing the new drug war as an unwelcome distraction. Participation in the drug war required a diversion of resources away from more serious crimes, such as murder, rape, grand theft, and violent assault—all of which were of far greater concern to most communities than illegal drug use.

The resistance within law enforcement to the drug war created something of a dilemma for the Reagan administration. In order for the war to actually work—that is, in order for it to succeed in achieving its political goals—it was necessary to build a consensus among state and local law enforcement agencies that the drug war should be a top priority in their hometowns. The solution: cash. Huge cash grants were made to those law enforcement agencies that were willing to make drug-law enforcement a top priority. The new system of control is traceable, to a significant degree, to a massive bribe offered to state and local law enforcement by the federal government.

In 1988, at the behest of the Reagan administration, Congress revised the program that provides federal aid to law enforcement, renaming it the Edward Byrne Memorial State and Local Law Enforcement Assistance Program after a New York City police officer who was shot to death while guarding the home of a drug-case witness. The Byrne program was designed to encourage every federal grant recipient to help fight the War on Drugs. Millions of dollars in federal aid have been offered to state and local law enforcement agencies willing to wage the war. This federal grant money has resulted in the proliferation of narcotics task forces, including those responsible for highway drug interdiction. Nationally, narcotics task forces make up about 40 percent of all Byrne grant funding, but in some states as much as 90 percent of all Byrne grant funds go toward specialized narcotics task forces. In fact, it is questionable whether any specialized drug enforcement activity would exist in some states without the Byrne program.

Other forms of valuable aid have been offered as well. The DEA has offered free training, intelligence, and technical support to state highway patrol agencies that are willing to commit their officers to highway drug interdiction. The Pentagon, for its part, has given away military intelligence and
millions of dollars in firepower to state and local agencies willing to make the rhetorical war a literal one.

Almost immediately after the federal dollars began to flow, law enforcement agencies across the country began to compete for funding, equipment, and training. By the late 1990s, the overwhelming majority of state and local police forces in the country had availed themselves of the newly available resources and added a significant military component to buttress their drug-war operations. According to the Cato Institute, in 1997 alone, the Pentagon handed over more than 1.2 million pieces of military equipment to local police departments. Similarly, the National Journal reported that between January 1997 and October 1999, the agency handled 3.4 million orders of Pentagon equipment from over eleven thousand domestic police agencies in all fifty states. Included in the bounty were “253 aircraft (including six- and seven-passenger airplanes, UH-60 Blackhawk and UH-1 Huey helicopters, 7,856 M-16 rifles, 181 grenade launchers, 8,131 bulletproof helmets, and 1,161 pairs of night-vision goggles.” A retired police chief in New Haven, Connecticut, told the New York Times, “I was offered tanks, bazookas, anything I wanted.”

Waging War

In barely a decade, the War on Drugs went from being a political slogan to an actual war. Now that police departments were suddenly flush with cash and military equipment earmarked for the drug war, they needed to make use of their new resources. As described in a Cato Institute report, paramilitary units (most commonly called Special Weapons and Tactics, or SWAT, teams) were quickly formed in virtually every major city to fight the drug war.

SWAT teams originated in the 1960s and gradually became more common in the 1970s, but until the drug war, they were used rarely, primarily for extraordinary emergency situations such as hostage takings, hijackings, or prison escapes. That changed in the 1980s, when local law enforcement agencies suddenly had access to cash and military equipment specifically for the purpose of conducting drug raids.

Today, the most common use of SWAT teams is to serve narcotics warrants, usually with forced, unannounced entry into the home. In fact, in some
jurisdictions drug warrants are served only by SWAT teams—regardless of the nature of the alleged drug crime. As the Miami Herald reported in 2002, “Police say they want [SWAT teams] in case of a hostage situation or a Columbine-type incident, but in practice the teams are used mainly to serve search warrants on suspected drug dealers. Some of these searches yield as little as a few grams of cocaine or marijuana.”

The rate of increase in the use of SWAT teams has been astonishing. In 1972, there were just a few hundred paramilitary drug raids per year in the United States. By the early 1980s, there were three thousand annual SWAT deployments, by 1996 there were thirty thousand, and by 2001 there were forty thousand. The escalation of military force was quite dramatic in cities throughout the United States. In the city of Minneapolis, Minnesota, for example, its SWAT team was deployed on no-knock warrants thirty-five times in 1986, but in 1996 that same team was deployed for drug raids more than seven hundred times.

Drug raids conducted by SWAT teams are not polite encounters. In countless situations in which police could easily have arrested someone or conducted a search without a military-style raid, police blast into people's homes, typically in the middle of the night, throwing grenades, shouting, and pointing guns and rifles at anyone inside, often including young children. In recent years, dozens of people have been killed by police in the course of these raids, including elderly grandparents and those who are completely innocent of any crime. Criminologist Peter Kraska reports that between 1989 and 2001 at least 780 cases of flawed paramilitary raids reached the appellate level, a dramatic increase over the 1980s, when such cases were rare, or earlier, when they were nonexistent. Many of these cases involve people killed in botched raids.

Alberta Spruill, a fifty-seven-year-old city worker from Harlem, is among the fallen. On May 16, 2003, a dozen New York City police officers stormed her apartment building on a no-knock warrant, acting on a tip from a confidential informant who told them a convicted felon was selling drugs on the sixth floor. The informant had actually been in jail at the time he said he'd bought drugs in the apartment, and the target of the raid had been arrested four days before, but the officers didn't check and didn't even interview the building superintendent. The only resident in the building was Alberta, described by friends as a “devout churchgoer.” Before entering, police deployed a flash-bang grenade, resulting in a blinding, deafening explosion. Alberta
went into cardiac arrest and died two hours later. The death was ruled a
homicide but no one was indicted.

Those who survive SWAT raids are generally traumatized by the event.
Not long after Spruill’s death, Manhattan Borough President C. Virginia
Fields held hearings on SWAT practices in New York City. According to the
Village Voice, “Dozens of black and Latino victims—nurses, secretaries, and
former officers—packed her chambers airing tales, one more horrifying than
the next. Most were unable to hold back tears as they described police ran-
sacking their homes, handcuffing children and grandparents, putting guns
to their heads, and being verbally (and often physically) abusive. In many
cases, victims had received no follow-up from the NYPD, even to fix busted
doors or other physical damage.”

Even in small towns, such as those in Dodge County, Wisconsin, SWAT
teams treat routine searches for narcotics as a major battlefront in the drug
war. In Dodge County, police raided the mobile home of Scott Bryant in
April 1995, after finding traces of marijuana in his garbage. Moments after
busting into the mobile home, police shot Bryant—who was unarmed—
killing him. Bryant’s eight-year-old son was asleep in the next room and
watched his father die while waiting for an ambulance. The district attorney
theorized that the shooter’s hand had clenched in “sympathetic physical re-
action” as his other hand reached for handcuffs. A spokesman for the Be-
retta company called this unlikely because the gun’s double-action trigger
was designed to prevent unintentional firing. The Dodge County sheriff
compared the shooting to a hunting accident.

SWAT raids have not been limited to homes, apartment buildings, or pub-
lic housing projects. Public high schools have been invaded by SWAT teams
in search of drugs. In November 2003, for example, police raided Stratford
High School in Goose Creek, South Carolina. The raid was recorded by the
school’s surveillance cameras as well as a police camera. The tapes show
students as young as fourteen forced to the ground in handcuffs as officers
in SWAT team uniforms and bulletproof vests aim guns at their heads and
lead a drug-sniffing dog to tear through their book bags. The raid was initi-
ated by the school’s principal, who was suspicious that a single student
might be dealing marijuana. No drugs or weapons were found during the
raid and no charges were filed. Nearly all of the students searched and seized
were students of color.

The transformation from “community policing” to “military policing,” began
in 1981, when President Reagan persuaded Congress to pass the Military Cooperation with Law Enforcement Act, which encouraged the military to give local, state, and federal police access to military bases, intelligence, research, weaponry, and other equipment for drug interdiction. That legislation carved a huge exception to the Posse Comitatus Act, the Civil War-era law prohibiting the use of the military for civilian policing. It was followed by Reagan’s National Security Decision Directive, which declared drugs a threat to U.S. national security, and provided for yet more cooperation between local, state, and federal law enforcement. In the years that followed, Presidents George Bush and Bill Clinton enthusiastically embraced the drug war and increased the transfer of military equipment, technology, and training to local law enforcement, contingent, of course, on the willingness of agencies to prioritize drug-law enforcement and concentrate resources on arrests for illegal drugs.

The incentives program worked. Drug arrests skyrocketed, as SWAT teams swept through urban housing projects, highway patrol agencies organized drug interdiction units on the freeways, and stop-and-frisk programs were set loose on the streets. Generally, the financial incentives offered to local law enforcement to pump up their drug arrests have not been well publicized, leading the average person to conclude reasonably (but mistakenly) that when their local police departments report that drug arrests have doubled or tripled in a short period of time, the arrests reflect a surge in illegal drug activity, rather than an infusion of money and an intensified enforcement effort.

One exception is a 2001 report by the Capital Times in Madison, Wisconsin. The Times reported that as of 2001, sixty-five of the state’s eighty-three local SWAT teams had come into being since 1980, and that the explosion of SWAT teams was traceable to the Pentagon’s weaponry giveaway program, as well as to federal programs that provide money to local police departments for drug control. The paper explained that, in the 1990s, Wisconsin police departments were given nearly a hundred thousand pieces of military equipment. And although the paramilitary units were often justified to city councils and skeptical citizens as essential to fight terrorism or deal with hostage situations, they were rarely deployed for those reasons but instead were sent to serve routine search warrants for drugs and make drug arrests. In fact, the Times reported that police departments had an extraordinary incentive to use their new equipment for drug enforcement: the extra federal
funding the local police departments received was tied to antidrug policing. The size of the disbursements was linked to the number of city or county drug arrests. Each arrest, in theory, would net a given city or county about $153 in state and federal funding. Non-drug-related policing brought no federal dollars, even for violent crime. As a result, when Jackson County, Wisconsin, quadrupled its drug arrests between 1999 and 2000, the county's federal subsidy quadrupled too.46

Finders Keepers

As if the free military equipment, training, and cash grants were not enough, the Reagan administration provided law enforcement with yet another financial incentive to devote extraordinary resources to drug law enforcement, rather than more serious crimes: state and local law enforcement agencies were granted the authority to keep, for their own use, the vast majority of cash and assets they seize when waging the drug war. This dramatic change in policy gave state and local police an enormous stake in the War on Drugs—not in its success, but in its perpetual existence. Law enforcement gained a pecuniary interest not only in the forfeited property, but in the profitability of the drug market itself.

Modern drug forfeiture laws date back to 1970, when Congress passed the Comprehensive Drug Abuse Prevention and Control Act. The Act included a civil forfeiture provision authorizing the government to seize and forfeit drugs, drug manufacturing and storage equipment, and conveyances used to transport drugs. As legal scholars Eric Blumenson and Eva Nilsen have explained, the provision was justified as an effort "to forestall the spread of drugs in a way criminal penalties could not—by striking at its economic roots."47 When a drug dealer is sent to jail, there are many others ready and willing to take his place, but seizing the means of production, some legislators reasoned, may shut down the trafficking business for good. Over the years, the list of properties subject to forfeiture expanded greatly, and the required connection to illegal drug activity became increasingly remote, leading to many instances of abuse. But it was not until 1984, when Congress amended the federal law to allow federal law enforcement agencies to retain and use any and all proceeds from asset forfeitures, and to allow state and
local police agencies to retain up to 80 percent of the assets' value, that a true revolution occurred.

Suddenly, police departments were capable of increasing the size of their budgets, quite substantially, simply by taking the cash, cars, and homes of people suspected of drug use or sales. At the time the new rules were adopted, the law governing civil forfeiture was so heavily weighted in favor of the government that fully 80 percent of forfeitures went uncontested. Property or cash could be seized based on mere suspicion of illegal drug activity, and the seizure could occur without notice or hearing, upon an ex parte showing of mere probable cause to believe that the property had somehow been "involved" in a crime. The probable cause showing could be based on nothing more than hearsay, innuendo, or even the paid, self-serving testimony of someone with interests clearly adverse to the property owner. Neither the owner of the property nor anyone else need be charged with a crime, much less found guilty of one. Indeed, a person could be found innocent of any criminal conduct and the property could still be subject to forfeiture. Once the property was seized, the owner had no right of counsel, and the burden was placed on him to prove the property's "innocence." Because those who were targeted were typically poor or of moderate means, they often lacked the resources to hire an attorney or pay the considerable court costs. As a result, most people who had their cash or property seized did not challenge the government's action, especially because the government could retaliate by filing criminal charges—baseless or not.

Not surprisingly, this drug forfeiture regime proved highly lucrative for law enforcement, offering more than enough incentive to wage the War on Drugs. According to a report commissioned by the Department of Justice, between 1988 and 1992 alone, Byrne-funded drug task forces seized over $1 billion in assets.48 Remarkably, this figure does not include drug task forces funded by the DEA or other federal agencies.

The actual operation of drug forfeiture laws seriously undermines the usual rhetoric offered in support of the War on Drugs, namely that it is the big "kingpins" that are the target of the war. Drug-war forfeiture laws are frequently used to allow those with assets to buy their freedom, while drug users and small-time dealers with few assets to trade are subjected to lengthy prison terms. In Massachusetts, for example, an investigation by journalists found that on average a "payment of $50,000 in drug profits won a 6.3 year
reduction in a sentence for dealers," while agreements of $10,000 or more bought elimination or reduction of trafficking charges in almost three-fourths of such cases. Federal drug forfeiture laws are one reason, Blumenson and Nilsen note, "why state and federal prisons now confine large numbers of men and women who had relatively minor roles in drug distribution networks, but few of their bosses."\(^50\)

The Shakedown

Quite predictably, the enormous economic rewards created by both the drug-war forfeiture and Byrne-grant laws has created an environment in which a very fine line exists between the lawful and the unlawful taking of other people's money and property—a line so thin that some officers disregard the formalities of search warrants, probable cause, and reasonable suspicion altogether. In *United States v. Reese*, for example, the Ninth Circuit Court of Appeals described a drug task force completely corrupted by its dependence on federal drug money. Operating as a separate unit within the Oakland Housing Authority, the task force behaved, in the words of one officer, "more or less like a wolfpack," driving up in police vehicles and taking "anything and everything we saw on the street corner."\(^51\) The officers were under tremendous pressure from their commander to keep their arrest numbers up, and all of the officers were aware that their jobs depended on the renewal of a federal grant. The task force commander emphasized that they would need statistics to show that the grant money was well spent and sent the task force out to begin a shift with comments like, "Let's go out and kick ass," and "Everybody goes to jail tonight for everything, right?"\(^52\)

Journalists and investigators have documented numerous other instances in which police departments have engaged in illegal shakedowns, searches, and threats in search of forfeitable property and cash. In Florida, reporters reviewed nearly one thousand videotapes of highway traffic stops and found that police had used traffic violations as an excuse—or pretext—to confiscate "tens of thousands of dollars from motorists against whom there [was] no evidence of wrongdoing," frequently taking the money without filing any criminal charges.\(^53\) Similarly, in Louisiana, journalists reported that Louisi-
ana police engaged in massive pretextual stops in an effort to seize cash, with the money diverted to police department ski trips and other unauthorized uses. And in Southern California, a Los Angeles Sheriff’s Department employee reported that deputies routinely planted drugs and falsified police reports to establish probable cause for cash seizures.

Lots of small seizures can be nearly as profitable, and require the expenditure of fewer investigative resources, than a few large busts. The Western Area Narcotics Task Force (WANT) became the focus of a major investigation in 1996 when almost $66,000 was discovered hidden in its headquarters. The investigation revealed that the task force seized large amounts of money, but also small amounts, and then dispensed it freely, unconstrained by reporting requirements or the task force’s mission. Some seizures were as small as eight cents. Another seizure of ninety-three cents prompted the local newspaper to observe that “once again the officers were taking whatever the suspects were carrying, even though by no stretch could pocket change be construed to be drug money.”

In 2000, Congress passed the Civil Asset Forfeiture Reform Act which was meant to address many of the egregious examples of abuse of civil forfeiture. Some of the most widely cited examples involved wealthy whites whose property was seized. One highly publicized case involved a reclusive millionaire, Donald Scott, who was shot and killed when a multiagency task force raided his two-hundred-acre Malibu ranch purportedly in search of marijuana plants. They never found a single marijuana plant in the course of the search. A subsequent investigation revealed that the primary motivation for the raid was the possibility of forfeiting Scott’s property. If the forfeiture had been successful, it would have netted the law enforcement agencies about $5 million in assets. In another case, William Munnerlynn had his Learjet seized by the DEA after he inadvertently used it to transport a drug dealer. Though charges were dropped against him within seventy-two hours, the DEA refused to return his Learjet. Only after five years of litigation and tens of thousands of dollars in legal fees was he able to secure return of his jet. When the jet was returned, it had sustained $100,000 worth of damage. Such cases were atypical but got the attention of Congress.

The Reform Act resulted in a number of significant due-process changes, such as shifting the burden of proof onto the government, eliminating the requirement that an owner post a cost bond, and providing some minimal
hardship protections for innocent parties who stand to lose their homes. These reforms, however, do not go nearly far enough.

Arguably the most significant reform is the creation of an “innocent owner” defense. Prior to the Reform Act, the Supreme Court had ruled that the guilt or innocence of the property’s owner was irrelevant to the property’s guilt—a ruling based on the archaic legal fiction that a piece of property could be “guilty” of a crime. The act remedied this insanity to some extent; it provides an “innocent owner” defense to those whose property has been seized. However, the defense is seriously undermined by the fact that the government’s burden of proof is so low—the government need only establish by a “preponderance of the evidence” that the property was involved in the commission of a drug crime. This standard of proof is significantly lower than the “clear and convincing evidence” standard contained in an earlier version of the legislation, and it is far lower than the “proof beyond a reasonable doubt” standard for criminal convictions.

Once the government meets this minimal burden, the burden then shifts to the owner to prove that she “did not know of the conduct giving rise to the forfeiture” or that she did “all that reasonably could be expected under the circumstances to terminate such use of the property.” This means, for example, that a woman who knew that her husband occasionally smoked pot could have her car forfeited to the government because she allowed him to use her car. Because the “car” was guilty of transporting someone who had broken a drug law at some time, she could legally lose her only form of transportation, even though she herself committed no crime. Indeed, women who are involved in some relationship with men accused of drug crimes, typically husbands or boyfriends, are among the most frequent claimants in forfeiture proceedings. Courts have not been forgiving of women in these circumstances, frequently concluding that “the nature and circumstances of the marital relationship may give rise to an inference of knowledge by the spouse claiming innocent ownership.”

There are other problems with this framework, not the least of which being that the owner of the property is not entitled to the appointment of counsel in the forfeiture proceeding, unless he or she has been charged with a crime. The overwhelming majority of forfeiture cases do not involve any criminal charges, so the vast majority of people who have their cash, cars, or homes seized must represent themselves in court, against the federal government. Oddly, someone who has actually been charged with a crime is en-
titled to the appointment of counsel in civil forfeiture proceedings, but those whose property has been forfeited but whose conduct did not merit criminal charges are on their own. This helps to explain why up to 90 percent of forfeiture cases in some jurisdictions are not challenged. Most people simply cannot afford the considerable cost of hiring an attorney. Even if the cost is not an issue, the incentives are all wrong. If the police seized your car worth $5,000, or took $500 cash from your home, would you be willing to pay an attorney more than your assets are worth to get them back? If you haven’t been charged with a crime, are you willing to risk the possibility that fighting the forfeiture might prompt the government to file criminal charges against you?

The greatest failure of the Reform Act, however, has nothing to do with one’s due process rights once property has been seized in a drug investigation. Despite all of the new procedural rules and formal protections, the law does not address the single most serious problem associated with drug-war forfeiture laws: the profit motive in drug-law enforcement. Under the new law, drug busts motivated by the desire to seize cash, cars, homes, and other property are still perfectly legal. Law enforcement agencies are still allowed, through revenue-sharing agreements with the federal government, to keep seized assets for their own use. Clearly, so long as law enforcement is free to seize assets allegedly associated with illegal drug activity—without ever charging anyone with a crime—local police departments, as well as state and federal law enforcement agencies, will continue to have a direct pecuniary interest in the profitability and longevity of the drug war. The basic structure of the system remains intact.

None of this is to suggest that the financial rewards offered for police participation in the drug war are the only reason that law enforcement decided to embrace the war with zeal. Undoubtedly, the political and cultural context of the drug war—particularly in the early years—encouraged the roundup. When politicians declare a drug war, the police (our domestic warriors) undoubtedly feel some pressure to wage it. But it is doubtful that the drug war would have been launched with such intensity on the ground but for the bribes offered for law enforcement’s cooperation.

Today the bribes may no longer be necessary. Now that the SWAT teams, the multiagency drug task forces, and the drug enforcement agenda have become a regular part of federal, state, and local law enforcement, it appears the drug war is here to stay. Funding for the Byrne-sponsored drug task
forces had begun to dwindle during President Bush's tenure, but Barack Obama, as a presidential candidate, promised to revive the Byrne grant program, claiming that it is "critical to creating the anti-drug task forces our communities need." Obama honored his word following the election, drastically increasing funding for the Byrne grant program despite its abysmal track record. The Economic Recovery Act of 2009 included more than $2 billion in new Byrne funding and an additional $600 million to increase state and local law enforcement across the country. Relatively little organized opposition to the drug war currently exists, and any dramatic effort to scale back the war may be publicly condemned as "soft" on crime. The war has become institutionalized. It is no longer a special program or politicized project; it is simply the way things are done.

Legal Misrepresentation

So far, we have seen that the legal rules governing the drug war ensure that extraordinary numbers of people will be swept into the criminal justice system—arrested on drug charges, often for very minor offenses. But what happens after arrest? How does the design of the system help to ensure the creation of a massive undercaste?

Once arrested, one's chances of ever being truly free of the system of control are slim, often to the vanishing point. Defendants are typically denied meaningful legal representation, pressured by the threat of a lengthy sentence into a plea bargain, and then placed under formal control—in prison or jail, on probation or parole. Most Americans probably have no idea how common it is for people to be convicted without ever having the benefit of legal representation, or how many people plead guilty to crimes they did not commit because of fear of mandatory sentences.

Tens of thousands of poor people go to jail every year without ever talking to a lawyer, and those who do meet with a lawyer for a drug offense often spend only a few minutes discussing their case and options before making a decision that will profoundly affect the rest of their lives. As one public defender explained to the Los Angeles Times, "They are herded like cattle [into the courtroom lockup], up at 3 or 4 in the morning. Then they have to make decisions that affect the rest of their lives. You can imagine how stressful it is."
More than forty years ago, in *Gideon v. Wainwright*, the Supreme Court ruled that poor people accused of serious crimes were entitled to counsel. Yet thousands of people are processed through America’s courts annually either with no lawyer at all or with a lawyer who does not have the time, resources or, in some cases, the inclination to provide effective representation. In *Gideon*, the Supreme Court left it to state and local governments to decide how legal services should be funded. However, in the midst of a drug war, when politicians compete with each other to prove how “tough” they can be on crime and criminals, funding public defender offices and paying private attorneys to represent those accused of crimes has been a low priority.

Approximately 80 percent of criminal defendants are indigent and thus unable to hire a lawyer. Yet our nation’s public defender system is woefully inadequate. The most visible sign of the failed system is the astonishingly large caseloads public defenders routinely carry, making it impossible for them to provide meaningful representation to their clients. Sometimes defenders have well over one hundred clients at a time; many of these clients are facing decades behind bars or life imprisonment. Too often the quality of court-appointed counsel is poor because the miserable working conditions and low pay discourage good attorneys from participating in the system. And some states deny representation to impoverished defendants on the theory that somehow they should be able to pay for a lawyer, even though they are scarcely able to pay for food or rent. In Virginia, for example, fees paid to court-appointed attorneys for representing someone charged with a felony that carries a sentence of less than twenty years are capped at $428. And in Wisconsin, more than 11,000 poor people go to court without representation every year because anyone who earns more than $3,000 per year is considered able to afford a lawyer. In Lake Charles, Louisiana, the public defender office has only two investigators for the 2,500 new felony cases and 4,000 new misdemeanor cases assigned to the office each year. The NAACP Legal Defense Fund and the Southern Center for Human Rights in Atlanta sued the city of Gulfport, Mississippi, alleging that the city operated a “modern day debtor’s prison” by jailing poor people who are unable to pay their fines and denying them the right to lawyers.

In 2004, the American Bar Association released a report on the status of indigent defense, concluding that, “All too often, defendants plead guilty, even if they are innocent, without really understanding their legal rights or
what is occurring. Sometimes the proceedings reflect little or no recognition that the accused is mentally ill or does not adequately understand English. The fundamental right to a lawyer that Americans assume applies to everyone accused of criminal conduct effectively does not exist in practice for countless people across the United States.  

Even when people are charged with extremely serious crimes, such as murder, they may find themselves languishing in jail for years without meeting with an attorney, much less getting a trial. One extreme example is the experience of James Thomas, an impoverished day laborer in Baton Rouge, Louisiana, who was charged with murder in 1996, and waited eight and a half years for his case to go to trial. It never did. His mother finally succeeded in getting his case dismissed, after scraping together $500 to hire an attorney, who demonstrated to the court that, in the time Thomas spent waiting for his case to go to trial, his alibi witness had died of kidney disease. Another Louisiana man, Johnny Lee Ball, was convicted of second-degree murder and sentenced to life in prison without the possibility of parole after meeting with a public defender for just eleven minutes before trial. If indicted murderers have a hard time getting meaningful representation, what are the odds that small-time drug dealers find themselves represented by a zealous advocate? As David Carroll, the research director for the National Legal Aid & Defender Association explained to USA Today, “There’s a real disconnect in this country between what people perceive is the state of indigent defense and what it is. I attribute that to shows like Law & Order, where the defendant says, ‘I want a lawyer,’ and all of a sudden Legal Aid appears in the cell. That’s what people think.”

Children caught up in this system are the most vulnerable and yet are the least likely to be represented by counsel. In 1967, the U.S. Supreme Court ruled in In re Gault that children under the age of eighteen have the right to legal assistance with any criminal charges filed against them. In practice, however, children routinely “waive” their right to counsel in juvenile proceedings. In some states, such as Ohio, as many as 90 percent of children charged with criminal wrongdoing are not represented by a lawyer. As one public defender explained, “The kids come in with their parents, who want to get this dealt with as quickly as possible, and they say, ‘You did it, admit it.’ If people were informed about what could be done, they might actually ask for help.”
Bad Deal

Almost no one ever goes to trial. Nearly all criminal cases are resolved through plea bargaining—a guilty plea by the defendant in exchange for some form of leniency by the prosecutor. Though it is not widely known, the prosecutor is the most powerful law enforcement official in the criminal justice system. One might think that judges are the most powerful, or even the police, but in reality the prosecutor holds the cards. It is the prosecutor, far more than any other criminal justice official, who holds the keys to the jailhouse door.

After the police arrest someone, the prosecutor is in charge. Few rules constrain the exercise of his or her discretion. The prosecutor is free to dismiss a case for any reason or no reason at all. The prosecutor is also free to file more charges against a defendant than can realistically be proven in court, so long as probable cause arguably exists—a practice known as overcharging.

The practice of encouraging defendants to plead guilty to crimes, rather than affording them the benefit of a full trial, has always carried its risks and downsides. Never before in our history, though, have such an extraordinary number of people felt compelled to plead guilty, even if they are innocent, simply because the punishment for the minor, nonviolent offense with which they have been charged is so unbearably severe. When prosecutors offer “only” three years in prison when the penalties defendants could receive if they took their case to trial would be five, ten, or twenty years—or life imprisonment—only extremely courageous (or foolish) defendants turn the offer down.

The pressure to plead guilty to crimes has increased exponentially since the advent of the War on Drugs. In 1986, Congress passed The Anti-Drug Abuse Act, which established extremely long mandatory minimum prison terms for low-level drug dealing and possession of crack cocaine. The typical mandatory sentence for a first-time drug offense in federal court is five or ten years. By contrast, in other developed countries around the world, a first-time drug offense would merit no more than six months in jail, if jail time is imposed at all. State legislatures were eager to jump on the “get tough” bandwagon, passing harsh drug laws, as well as “three strikes” laws mandating a life sentence for those convicted of any third offense. These mandatory
minimum statutory schemes have transferred an enormous amount of power from judges to prosecutors. Now, simply by charging someone with an offense carrying a mandatory sentence of ten to fifteen years or life, prosecutors are able to force people to plead guilty rather than risk a decade or more in prison. Prosecutors admit that they routinely charge people with crimes for which they technically have probable cause but which they seriously doubt they could ever win in court. They “load up” defendants with charges that carry extremely harsh sentences in order to force them to plead guilty to lesser offenses and—here’s the kicker—to obtain testimony for a related case. Harsh sentencing laws encourage people to snitch.

The number of snitches in drug cases has soared in recent years, partly because the government has tempted people to “cooperate” with law enforcement by offering cash, putting them “on payroll,” and promising cuts of seized drug assets, but also because ratting out co-defendants, friends, family, or acquaintances is often the only way to avoid a lengthy mandatory minimum sentence. In fact, under the federal sentencing guidelines, providing “substantial assistance” is often the only way defendants can hope to obtain a sentence below the mandatory minimum. The “assistance” provided by snitches is notoriously unreliable, as studies have documented countless informants who have fabricated stories about drug-related and other criminal activity in exchange for money or leniency in their pending criminal cases. While such conduct is deplorable, it is not difficult to understand. Who among us would not be tempted to lie if it was the only way to avoid a forty-year sentence for a minor drug crime?

The pressure to plea-bargain and thereby “convict yourself” in exchange for some kind of leniency is not an accidental by-product of the mandatory-sentencing regime. The U.S. Sentencing Commission itself has noted that “the value of a mandatory minimum sentence lies not in its imposition, but in its value as a bargaining chip to be given away in return for the resource-saving plea from the defendant to a more leniently sanctioned charge.” Describing severe mandatory sentences as a bargaining chip is a major understatement, given its potential for extracting guilty pleas from people who are innocent of any crime.

It is impossible to know for certain how many innocent drug defendants convict themselves every year by accepting a plea bargain out of fear of mandatory sentences, or how many are convicted due to lying informants and paid witnesses, but reliable estimates of the number of innocent people cur-
rently in prison tend to range from 2 percent to 5 percent. While those numbers may sound small (and probably are underestimates), they translate into thousands of innocent people who are locked up, some of whom will die in prison. In fact, if only 1 percent of America's prisoners are actually innocent of the crimes for which they have been convicted, that would mean tens of thousands of innocent people are currently languishing behind bars in the United States.

The real point here, however, is not that innocent people are locked up. That has been true since penitentiaries first opened in America. The critical point is that thousands of people are swept into the criminal justice system every year pursuant to the drug war without much regard for their guilt or innocence. The police are allowed by the courts to conduct fishing expeditions for drugs on streets and freeways based on nothing more than a hunch. Homes may be searched for drugs based on a tip from an unreliable, confidential informant who is trading the information for money or to escape prison time. And once swept inside the system, people are often denied attorneys or meaningful representation and pressured into plea bargains by the threat of unbelievably harsh sentences—sentences for minor drug crimes that are higher than many countries impose on convicted murderers. This is the way the roundup works, and it works this way in virtually every major city in the United States.

Time Served

Once convicted of felony drug charges, one's chances of being released from the system in short order are slim, at best. The elimination of judicial discretion through mandatory sentencing laws has forced judges to impose sentences for drug crimes that are often longer than those violent criminals receive. When judges have discretion, they may consider a defendant's background and impose a lighter penalty if the defendant's personal circumstances—extreme poverty or experience of abuse, for example—warrant it. This flexibility—which is important in all criminal cases—is especially important in drug cases, as studies have indicated that many drug defendants are using or selling to support an addiction. Referring a defendant to treatment, rather than sending him or her to prison, may well be the most prudent choice—saving government resources and potentially saving the defendant
from a lifetime of addiction. Likewise, imposing a short prison sentence (or none at all) may increase the chances that the defendant will experience successful re-entry. A lengthy prison term may increase the odds that re-entry will be extremely difficult, leading to relapse, and re-imprisonment. Mandatory drug sentencing laws strip judges of their traditional role of considering all relevant circumstances in an effort to do justice in the individual case.

Nevertheless, harsh mandatory minimum sentences for drug offenders have been consistently upheld by the U.S. Supreme Court. In 1982, the Supreme Court upheld forty years of imprisonment for possession and an attempt to sell 9 ounces of marijuana.\textsuperscript{76} Several years later, in \textit{Harmelin v. Michigan}, the Court upheld a sentence of \textit{life imprisonment} for a defendant with no prior convictions who attempted to sell 672 grams (approximately 23 ounces) of crack cocaine.\textsuperscript{77} The Court found the sentences imposed in those cases “reasonably proportionate” to the offenses committed—and not “cruel and unusual” in violation of the Eighth Amendment. This ruling was remarkable given that, prior to the Drug Reform Act of 1986, the longest sentence Congress had ever imposed for possession of any drug in any amount was one year. A life sentence for a first-time drug offense is unheard of in the rest of the developed world. Even for high-end drug crimes, most countries impose sentences that are measured in months, rather than years. For example, a conviction for selling a kilogram of heroin yields a mandatory ten-year sentence in U.S. federal court, compared with six months in prison in England.\textsuperscript{78} Remarkably, in the United States, a life sentence is deemed perfectly appropriate for a first-time drug offender.

The most famous Supreme Court decision upholding mandatory minimum sentences is \textit{Lockyer v. Andrade}.\textsuperscript{79} In that case, the Court rejected constitutional challenges to sentences of twenty-five years without parole for a man who stole three golf clubs from a pro shop, and fifty years without parole for another man for stealing children’s videotapes from a Kmart store. These sentences were imposed pursuant to California’s controversial three strikes law, which mandates a sentence of twenty-five years to life for recidivists convicted of a third felony, no matter how minor. Writing for the Court’s majority, Justice Sandra Day O’Connor acknowledged that the sentences were severe but concluded that they are not grossly disproportionate to the offense, and therefore do not violate the Eighth Amendment’s ban on “cruel and unusual” punishments. In dissent, Justice David H. Souter retorted, “If
Andrade’s sentence [for stealing videotapes] is not grossly disproportionate, the principle has no meaning.” Similarly, counsel for one of the defendants, University of Southern California law professor Erwin Chemerinsky, noted that the Court’s reasoning makes it extremely difficult if not impossible to challenge any recidivist sentencing law: “If these sentences aren’t cruel and unusual punishment, what would be?”

Mandatory sentencing laws are frequently justified as necessary to keep “violent criminals” off the streets, yet those penalties are imposed most often against drug offenders and those who are guilty of nonviolent crimes. In fact, under the three-strikes regime in California, a “repeat offender” could be someone who had only a single prior case decades ago, and one arrest can result in multiple strikes. For example, imagine a young man, eighteen years old, who is arrested as part of an undercover operation and charged with two counts of dealing cocaine to minors. He had been selling to friends to earn extra money for shoes and basic things his mother could not afford. The prosecutor offers him probation if he agrees to plead guilty to both charges and to snitch on a bigger dealer. Terrified of doing prison time, he takes the deal. Several years later, he finds his punishment will never end. Branded a felon, he is struggling to survive and to support his children. One night he burglarizes a corner store and steals food, toothpaste, Pepsi, and diapers for his baby boy. He is arrested almost immediately a few blocks away. That’s it for him. He now has three strikes. His burglary can be charged as a third strike because of his two prior felony convictions. He is eligible for life imprisonment. His children will be raised without a father.

Or imagine a woman struggling with drug addiction, unable to obtain treatment, and desperate for money so she can feed her habit. Together with her boyfriend, she burglarizes two homes, stealing televisions they hope to sell. After her arrest, she takes a plea deal, spends several years in prison, and is released with two strikes on her record, one for each burglary. Two decades later, she relapses—after being clean for fifteen years—and is arrested for selling crack. She made the sale to support her relapse. That’s it for her. She can be locked up for the rest of her life.

These examples may sound extreme, but real life can be worse. Sentences for each charge can run consecutively, so a defendant can easily face a sentence of fifty, seventy-five, or one hundred years to life arising from a single case. It is not uncommon for people to receive prison sentences of more than fifty years for minor crimes. In fact, fifty years to life was the actual
sentence given to Leandro Andrade for stealing videotapes, a sentence upheld by the Supreme Court.

The clear majority of those subject to harsh mandatory minimum sentences in the federal system are drug offenders. Most are low-level, minor drug dealers—not “drug kingpins.” The stories are legion. Marcus Boyd was arrested after selling 3.9 grams of crack cocaine to a confidential informant working with a regional drug task force. At the time of his arrest, Marcus was twenty-four years old and had been addicted to drugs for six years, beginning shortly after his mother’s death and escalating throughout his early twenties. He met the informant through a close family friend, someone he trusted. At sentencing, the judge based the drug quantity calculation on testimony from the informant and another witness, who both claimed they bought crack from Marcus on other occasions. As a result, Marcus was held accountable for 37.4 grams (the equivalent of 1.3 ounces) based on the statements made by the informant and the other witness. He was sentenced to more than fourteen years in prison. His two children were six and seven years old at the time of his sentencing. They will be adults when he is released.81

Weldon Angelos is another casualty of the drug war. He will spend the rest of his life in prison for three marijuana sales. Angelos, a twenty-four-year-old record producer, possessed a weapon—which he did not use or threaten to use—at the time of the sales. Under federal sentencing guidelines, however, the sentencing judge was obligated to impose a fifty-five-year mandatory minimum sentence. Upon doing so, the judge noted his reluctance to send the young man away for life for three marijuana sales. He said from the bench, “The Court believes that to sentence Mr. Angelos to prison for the rest of his life is unjust, cruel, and even irrational.”82

Some federal judges, including conservative judges, have quit in protest of federal drug laws and sentencing guidelines. Face-to-face with those whose lives hang in the balance, they are far closer to the human tragedy occasioned by the drug war than the legislators who write the laws from afar. Judge Lawrence Irving, a Reagan appointee, noted upon his retirement: “If I remain on the bench, I have no choice but to follow the law. I just can’t, in good conscience, continue to do this.”83 Other judges, such as Judge Jack Weinstein, publicly refused to take any more drug cases, describing “a sense of depression about much of the cruelty I have been a party to in connection with the ‘war on drugs.’”84 Another Reagan appointee, Judge Stanley Marshall, told a reporter, “I’ve always been considered a fairly harsh sentencer,
but it’s killing me that I’m sending so many low-level offenders away for all this time.”65 He made the statement after imposing a five-year sentence on a mother in Washington, D.C., who was convicted of “possession” of crack found by police in a locked box that her son had hidden in her attic. In California, reporters described a similar event:

U.S. District Judge William W. Schwarzer, a Republican appointee, is not known as a light sentencer. Thus it was that everyone in his San Francisco courtroom watched in stunned silence as Schwarzer, known for his stoic demeanor, choked with tears as he anguished over sentencing Richard Anderson, a first offender Oakland longshoreman, to ten years in prison without parole for what appeared to be a minor mistake in judgment in having given a ride to a drug dealer for a meeting with an undercover agent.66

Even Supreme Court Justice Anthony Kennedy has condemned the harsh mandatory minimum sentences imposed on drug offenders. He told attorneys gathered for the American Bar Association’s 2003 annual conference: “Our [prison] resources are misspent, our punishments too severe, our sentences too loaded.” He then added, “I can accept neither the necessity nor the wisdom of federal mandatory minimum sentences. In all too many cases, mandatory minimum sentences are unjust.”67

The Prison Label

Most people imagine that the explosion in the U.S. prison population during the past twenty-five years reflects changes in crime rates. Few would guess that our prison population leaped from approximately 350,000 to 2.3 million in such a short period of time due to changes in laws and policies, not changes in crime rates. Yet it has been changes in our laws—particularly the dramatic increases in the length of prison sentences—that have been responsible for the growth of our prison system, not increases in crime. One study suggests that the entire increase in the prison population from 1980 to 2001 can be explained by sentencing policy changes.68

Because harsh sentencing is a major cause of the prison explosion, one might reasonably assume that substantially reducing the length of prison
sentences would effectively dismantle this new system of control. That view, however, is mistaken. This system depends on the prison label, not prison time.

Once a person is labeled a felon, he or she is ushered into a parallel universe in which discrimination, stigma, and exclusion are perfectly legal, and privileges of citizenship such as voting and jury service are off-limits. It does not matter whether you have actually spent time in prison; your second-class citizenship begins the moment you are branded a felon. Most people branded felons, in fact, are not sentenced to prison. As of 2008, there were approximately 2.3 million people in prisons and jails, and a staggering 5.1 million people under “community correctional supervision”—i.e., on probation or parole. Merely reducing prison terms does not have a major impact on the majority of people in the system. It is the badge of inferiority—the felony record—that relegates people for their entire lives, to second-class status. As described in chapter 4, for drug felons, there is little hope of escape. Barred from public housing by law, discriminated against by private landlords, ineligible for food stamps, forced to “check the box” indicating a felony conviction on employment applications for nearly every job, and denied licenses for a wide range of professions, people whose only crime is drug addiction or possession of a small amount of drugs for recreational use find themselves locked out of the mainstream society and economy—permanently.

No wonder, then, that most people labeled felons find their way back into prison. According to a Bureau of Justice Statistics study, about 30 percent of released prisoners in its sample were rearrested within six months of release. Within three years, nearly 68 percent were rearrested at least once for a new offense. Only a small minority are rearrested for violent crimes; the vast majority are rearrested for property offenses, drug offenses, and offenses against the public order.

For those released on probation or parole, the risks are especially high. They are subject to regular surveillance and monitoring by the police and may be stopped and searched (with or without their consent) for any reason or no reason at all. As a result, they are far more likely to be arrested (again) than those whose behavior is not subject to constant scrutiny by law enforcement. Probationers and parolees are at increased risk of arrest because their lives are governed by additional rules that do not apply to everyone
else. Myriad restrictions on their travel and behavior (such as a prohibition on associating with other felons), as well as various requirements of probation and parole (such as paying fines and meeting with probation officers), create opportunities for arrest. Violation of these special rules can land someone right back in prison. In fact, that is what happens a good deal of the time.

The extraordinary increase in prison admissions due to parole and probation violations is due almost entirely to the War on Drugs. With respect to parole, in 1980, only 1 percent of all prison admissions were parole violators. Twenty years later, more than one third (35 percent) of prison admissions resulted from parole violations.\textsuperscript{93} To put the matter more starkly: \textit{About as many people were returned to prison for parole violations in 2000 as were admitted to prison in 1980 for all reasons.}\textsuperscript{94} Of all parole violators returned to prison in 2000, only one-third were returned for a new conviction; two-thirds were returned for a technical violation such as missing appointments with a parole officer, failing to maintain employment, or failing a drug test.\textsuperscript{95} In this system of control, failing to cope well with one’s exile status is treated like a crime. If you fail, after being released from prison with a criminal record—your personal badge of inferiority—to remain drug free, or if you fail to get a job against all the odds, or if you get depressed and miss an appointment with your parole officer (or if you cannot afford the bus fare to take you there), you can be sent right back to prison—where society apparently thinks millions of Americans belong.

This disturbing phenomenon of people cycling in and out of prison, trapped by their second-class status, has been described by Loïc Wacquant as a "closed circuit of perpetual marginality."\textsuperscript{96} Hundreds of thousands of people are released from prison every year, only to find themselves locked out of the mainstream society and economy. Most ultimately return to prison, sometimes for the rest of their lives. Others are released again, only to find themselves in precisely the circumstances they occupied before, unable to cope with the stigma of the prison label and their permanent pariah status.

Reducing the amount of time people spend behind bars—by eliminating harsh mandatory minimums—will alleviate some of the unnecessary suffering caused by this system, but it will not disturb the closed circuit. Those labeled felons will continue to cycle in and out of prison, subject to perpetual
surveillance by the police, and unable to integrate into the mainstream society and economy. Unless the number of people who are labeled felons is dramatically reduced, and unless the laws and policies that keep ex-offenders marginalized from the mainstream society and economy are eliminated, the system will continue to create and maintain an enormous undercaste.
